Modeling and Analysis of Dynamic Systems Charles M. Close, Dean K. Frederick, Jonathan C. Newell, 2001-08-20 The third edition of Modeling and Analysis of Dynamic Systems continues to present students with the methodology applicable to the modeling and analysis of a variety of dynamic systems regardless of their physical origin. It includes detailed modeling of mechanical, electrical, electro-mechanical, thermal, and fluid systems. Models are developed in the form of state variable equations, input-output differential equations, transfer functions, and block diagrams. The Laplace transform is used for analytical solutions. Computer solutions are based on MATLAB and Simulink. Examples include both linear and nonlinear systems. An introduction is given to the modeling and design tools for feedback control systems. The text offers considerable flexibility in the selection of material for a specific course. Students majoring in many different engineering disciplines have used the text. Such courses are frequently followed by control system design courses in the various disciplines.

Dynamic Systems and Control Engineering Nader Jalili, Nicholas W. Candelino, 2023-06-15 Using a step-by-step approach, this textbook provides a modern treatment of the fundamental concepts, analytical techniques, and software tools used to perform multi-domain modeling, system analysis, and simulation, linear control system design and implementation, and advanced control engineering. Chapters follow a progressive structure which builds from modeling fundamentals to analysis and advanced control, while showing the interconnections between topics and solved problems, and examples are included throughout. Students can easily recall key topics and test understanding using Review Note and Concept Quiz boxes, and over 200 end-of-chapter homework exercises with accompanying Concept Keys are included. Focusing on practical understanding, students will gain hands-on experience of many modern MATLAB tools, including Simulink and physical modeling in Simscape™. With a solutions manual, MATLAB code, and Simulink/Simscape™ files available online, this is ideal for senior undergraduates taking courses on modeling, analysis, and control of dynamic systems, as well as graduates studying control engineering.
