HUMAN ANATOMY AND PHYSIOLOGY

Study of the human organism and its internal body

Anatomy

The study of the structure of the human body and its parts.

Physiology

The study of the function of the human body and its parts.

Structural levels

Studying the human body at the structural level involves understanding the following levels:

- 1. **Chemical level** - study of the chemical composition of the body.
- 2. **Cellular level** - study of the structure and function of cells.
- 3. **Tissue level** - study of the structure and function of tissues.
- 4. **Organ level** - study of the structure and function of organs.
- 5. **System level** - study of the structure and function of body systems.
- 6. **Organism level** - study of the structure and function of the whole body.

CELLS AND TISSUES

Cells are the basic units of structure and function of the body.

Organization of cellular levels

Cells are organized into tissues, which are organized into organs.

Organs are organized into systems, which are organized into the body.

The body is organized into a hierarchy of structural levels.

1. **Chemical level** - study of the chemical composition of the body.

2. **Cellular level** - study of the structure and function of cells.

3. **Tissue level** - study of the structure and function of tissues.

4. **Organ level** - study of the structure and function of organs.

5. **System level** - study of the structure and function of body systems.

6. **Organism level** - study of the structure and function of the whole body.

The neuron is the basic unit of the nervous system. It is responsible for receiving and transmitting information.

Neurons

Neurons are specialized cells that transmit information.

They are organized into the nervous system.

The nervous system is responsible for controlling the body.

ORGANS

Organs are structures that perform specific functions.

They are organized into systems, which are organized into the body.

The body is organized into a hierarchy of structural levels.

1. **Chemical level** - study of the chemical composition of the body.

2. **Cellular level** - study of the structure and function of cells.

3. **Tissue level** - study of the structure and function of tissues.

4. **Organ level** - study of the structure and function of organs.

5. **System level** - study of the structure and function of body systems.

6. **Organism level** - study of the structure and function of the whole body.

The body is organized into a hierarchy of structural levels.

1. **Chemical level** - study of the chemical composition of the body.

2. **Cellular level** - study of the structure and function of cells.

3. **Tissue level** - study of the structure and function of tissues.

4. **Organ level** - study of the structure and function of organs.

5. **System level** - study of the structure and function of body systems.

6. **Organism level** - study of the structure and function of the whole body.

Digestive system

The digestive system is responsible for breaking down food into nutrients.

It is organized into the digestive tract.

The digestive tract is responsible for the digestion of food.

SYSTEMS

Systems are groups of organs that work together to perform a specific function.

They are organized into the body.

The body is organized into a hierarchy of structural levels.

1. **Chemical level** - study of the chemical composition of the body.

2. **Cellular level** - study of the structure and function of cells.

3. **Tissue level** - study of the structure and function of tissues.

4. **Organ level** - study of the structure and function of organs.

5. **System level** - study of the structure and function of body systems.

6. **Organism level** - study of the structure and function of the whole body.

The body is organized into a hierarchy of structural levels.

1. **Chemical level** - study of the chemical composition of the body.

2. **Cellular level** - study of the structure and function of cells.

3. **Tissue level** - study of the structure and function of tissues.

4. **Organ level** - study of the structure and function of organs.

5. **System level** - study of the structure and function of body systems.

6. **Organism level** - study of the structure and function of the whole body.

Respiratory system

The respiratory system is responsible for the exchange of gases.

It is organized into the respiratory tract.

The respiratory tract is responsible for the respiration of the body.

The body is organized into a hierarchy of structural levels.

1. **Chemical level** - study of the chemical composition of the body.

2. **Cellular level** - study of the structure and function of cells.

3. **Tissue level** - study of the structure and function of tissues.

4. **Organ level** - study of the structure and function of organs.

5. **System level** - study of the structure and function of body systems.
