Across the Usa and Canada in 1887 Dr. Lewis Lewin, 2011-09-15 In 1887 the renowned German scientist Louis Lewin and his uncle John Warburg set out across the Atlantic on what was to be an arduous seven week journey spanning the North American continent east and west Lewin's wife Clara remained in Berlin with their daughters In daily letters Lewin shares with Clara his account of his trans Atlantic trip and of his subsequent travels by rail and steamer to Montreal across Canada to Vancouver thence to San Francisco and from California back east While in America Lewin investigates the status of medical school education here visits the newly established laboratories of the Parke Davis Co in Detroit Michigan and attends the International Medical Congress held that year in Washington D.C. A specialist in the study of poisons and hallucinogens Lewin also visits the opium dens of San Francisco's Chinatown graphically describing what he sees there These letters are more than a pedestrian account of places visited and sights seen they express Lewin's musings on the nascent economic power of the United States on the disparities between rich and poor that were evident then and on the natural resources that he observed from his train window He is also frank about his likes and dislikes and in assessing his own strengths and weaknesses Louis Lewin was born in 1850 in Tuchol in what was then West Prussia to Orthodox Jewish parents fleeing the pogroms in eastern Poland The family arrived in Berlin in 1856 His primary school teachers recognizing the young Lewin's aptitude for science arranged for his admission to a renowned Gymnasium that in turn enabled him to enter Berlin University After receiving his medical degree there Lewin's outstanding academic record would have been qualified him for a teaching

position there but the anti-Semitism of the time closed those doors to him. Instead, he set up a private laboratory and lecture hall.

Essential neural anatomy for creating a clinically translatable osseointegrated neural interface for prosthetic control in sheep Kirsten A. Gunderson, Scott K. Odorico, Zeeda H. Nkana, Lucas Sears, Grant Seils, Rashea L. Minor, Weifeng Zeng, Samuel O. Poore, Aaron M. Dingle, 2023-09-13

Aim: Ovine models for osseointegrated prosthetics research are well established but do not consider neural control of advanced prostheses. The validity of interfacing technologies such as the Osseointegrated Neural Interface (ONI) in their ability to provide communication between native nerves and advanced prosthetics is required, necessitating a stable longitudinal large animal model for testing. The objective of this study is to provide a detailed anatomic description of the major nerves distal to the carpal and tarsal joints, informing the creation of a chronic ONI for prosthetic control in sheep.

Methods: Six pelvic and six thoracic cadaveric limbs from mature female non-lactating sheep were utilized. Radiographs were obtained to determine average bone length, medullary canal diameter, and cortical bone thickness. Microsurgical dissection was performed to discern topographical neuroanatomy and average circumferences of the major nerves of the pelvic and thoracic limbs. Histologic analysis was performed. A surgical approach for the creation of ONI was designed.

Results: Average metacarpal and metatarsal length was 15.0 cm (0.0) and 19.7 cm (1.0) respectively. Average intramedullary canal diameter was 12.91 mm (3.69) for forelimbs and 12.60 mm (3.69) for hindlimbs. The thoracic limb nerves consisted of one dorsal and three ventral nerves with an average circumference of 5.14 mm (2.00) and 5.05 mm (1.06) respectively. Pelvic limb nerves consisted of two dorsal and one ventral nerve with an average circumference of 6.27 mm (1.79) and 5.40 mm (0.53) respectively.

Conclusions: These anatomic data inform the surgical approach and manufacture of a sensory ONI for chronic testing in awake, freely ambulating animals for future clinical translation.
