Abstract

Background: Mobile mindfulness meditation (MMM) is a mindfulness meditation intervention implemented using mobile devices such as smartphones and apps. MMM has been used to help manage the mental health of university students.

Objective: This study aims to evaluate the effectiveness of MMM on the mental health of university students in the areas of stress, anxiety, depression, mindfulness, well-being, and resilience.

Methods: We conducted a systematic review and meta-analysis of the effectiveness of MMM on the mental health of university students. This study followed the PRISMA (Preferred Reporting Items for Systematic Reviews and Meta-Analyses) guidelines. An electronic literature search was performed on PubMed, Web of Science, EBSCO, Cochrane Library, and Embase databases, from inception to July 16, 2021. This study was conducted to identify studies that reported the effects of MMM on the primary outcomes including stress, anxiety, and depression, and on the secondary outcomes including mindfulness, well-being, and resilience. Two reviewers retrieved articles, evaluated quality, and extracted data independently. The methodological quality of the selected studies was determined using the Cochrane criteria for risk-of-bias assessment. Standardized mean differences (SMDs) for continuous outcomes and risk ratios for dichotomous outcomes were calculated. Sensitivity analyses and subgroup analyses were performed for results with high heterogeneity. The RevMan version 5.3 was used to perform meta-analysis.

Results: A total of 10 studies, including 958 university students, were selected for this meta-analysis. Results of the primary outcome showed that the MMM groups were more effective than the control groups in decreasing stress (SMD -0.41 , 95% CI -0.59 to -0.23 ; $P<.001$) and alleviating anxiety (SMD -0.29 , 95% CI -0.50 to -0.09 ; $P=.004$). However, there was no difference between the MMM groups and the control groups in depression (SMD -0.14 , 95% CI -0.30 to 0.03 ; $P=.11$). The use of either waitlist control or traditional face-to-face intervention in the control group was identified as the source of heterogeneity. Specifically, the waitlist control subgroup (SMD -0.33 , 95% CI -0.53 to -0.13 ; $P=.002$) was superior when compared with the face-to-face subgroup (SMD 0.29 , 95% CI -0.01 to 0.59 ; $P=.06$). Results of the secondary outcome showed that the MMM groups were more effective than the control groups in enhancing well-being (SMD 0.30 , 95% CI 0.11 – 0.50 ; $P=.003$) and improving mindfulness (SMD 2.66 , 95% CI 0.77 – 4.55 ; $P=.006$). Whether commercial sponsorship was obtained was considered as the source of heterogeneity. The “without company support” group (SMD 17.60 , 95% CI 11.32 – 23.87 ; $P<.001$) was superior to the “with company support” group (SMD 1.17 , 95% CI -0.82 to 3.15 ; $P=.25$) in raising the level of mindfulness. However, there was no difference between the MMM and control groups in resilience (SMD -0.06 , 95% CI -0.26 to 0.15 ; $P=.59$). The evidence level of the results from the 10 studies was determined to be moderate to low.

Conclusions: MMM was an effective method to reduce stress and anxiety, and to increase the well-being and mindfulness of university students. However, further studies are needed to confirm our findings.

Mindfulness, Mind-body Exercises, and Health Promotion Guodong Zhang,

Yang Cao, Zi Yan, 2025-02-14 High intensity sports and physical exercise have been linked to various health benefits. However, when it comes to increasing longevity, these activities may not be an ideal option for the general population. Mind body exercise, which combines physical exercise with mindfulness, may be more effective in promoting and restoring health, especially for those with chronic symptoms or poor health conditions. Many mind body exercises, such as Taichi, Qigong, Chan Chuan, and Yoga, have their roots in Eastern cultures. They have gained popularity around the world and became a new fashion in the post COVID 19 era. These exercises typically help practitioners shift their focus from the outside world, past or future, to the present moment through gentle body movements. Mind body exercises emphasize the body's innate ability to heal itself. By disconnecting from the noisy outside world, the body is given the opportunity to heal. This aligns with the classic belief in Chinese medicine that the body itself is the best medicine.

Handbook of Mindfulness and Self-Regulation: Theoretical, Cognitive Neuroscience, Social-Personality, and Clinical Perspectives

Brian D. Ostafin, Michael D. Robinson, Brian P. Meier, 2025-09-26 The second edition of the handbook provides an updated and expanded overview of theoretical models, empirical studies, and critical perspectives concerning the interface between mindfulness and self-regulation. The 20 chapters cover advances in the field since the first edition was published, and 85% of the chapters cover new material. Chapters are grouped by Theoretical Perspectives, Cognitive Neuroscience Perspectives, Social Personality Perspectives, and Clinical Perspectives, representing most major areas of psychology and cognitive science. Given the expanded scope, the new edition is titled **Handbook of Mindfulness and Self-Regulation: Theoretical, Cognitive Neuroscience, Social Personality, and Clinical Perspectives**.

The Psychology of Meditation Peter Sedlmeier, 2022-05-10 All you need to know about the psychology of meditation. Written by an expert in the field, provides unique theories of meditation approaches. Explores traditional and Western approaches. Recommends how to improve future research. Explores new topics, e.g., negative effects. More about the book: What is meditation? What do people hope to get from practicing it, and what do they really get? How can the effects of meditation be explained? And what are the best approaches to researching the psychology of meditation so we can understand more? This unique book by a leading expert provides state-of-the-art answers to these questions. Contrary to commonly accepted wisdom, meditation comes in a range of varieties, and the reasons why people begin to meditate and stay with it are also numerous and varied. Even mindfulness, which is often wrongly used as a synonym for meditation, comes in many forms. The book succinctly summarizes the beneficial effects found in the avalanche of studies available, especially in clinical contexts, and also explores recently emerging topics such as negative effects and the impact of ethics and spirituality. The author expertly provides theories of the four traditional meditation approaches, which has never been done before in this form, and gives a critical overview of Western approaches to explain the effects of meditation. In conclusion, he makes recommendations on how to improve future meditation research. This book is of interest to mental health practitioners, researchers, students interested in meditation and mindfulness approaches.
