Industrial Aviation Management Martin Hinsch, 2018-09-07. This book outlines the structure and activities of companies in the European aviation industry. The focus is on the design, production and maintenance of components, assemblies, engines and the aircraft itself. In contrast to other industries, the technical aviation industry is subject to many specifics since its activities are highly regulated by the European Aviation Safety Agency (EASA), the National Aviation Authorities and by the aviation industry standard EN 9100. These regulations can influence the companies' organization, personnel qualification, quality management systems as well as the provision of products and services. This book gives the reader a deeper, up-to-date insight into today's quality and safety requirements for the modern aviation industry. Aviation-specific interfaces and procedures are looked at from both the aviation legislation standpoint as well as from a practical, operational perspective.

Air Transport and Operations Richard Curran, 2012. Air transport must evolve if it is to optimize its value in the 21st century. The mood in the aerospace industry is positive with regard to economic recovery, but the focus in this transitional time must be on sustaining value without losing sight of environmental and safety priorities. This book presents the proceedings of the joint conference held in Delft, the Netherlands, in June 2012, incorporating the 3rd International Air Transport Operations Symposium (ATOS), the 3rd Association of Scientific Development in Air Traffic Management in Europe (ASDA) Seminar, the 6th International Meeting for Aviation Products Support Processes (IMAPP) and the 2012 Complex World Seminar. The conference brought together over 200 participants from industry and academia, all of whom share the common goal of improving performance and capacity by advancing the efficiency, sustainability and safety of air transport. Presentations at the conference were divided equally between academic papers and more applied industry sessions. The book includes the majority of academic papers presented at the conference and provides a wide overview of the issues currently of importance in the world of air transport.
