Piller, Melanie Padberg, 2023-12-29 This seminal compendium available through open access illuminates the forefront of digital collaboration in production It introduces the visionary concept of the Internet of Production IoP an ambitious initiative by Germany s esteemed Cluster of Excellence at RWTH Aachen University This handbook pioneers the integration of data models and knowledge across development production and user cycles offering interdisciplinary insights into production technology s horizons with the overall objective to create a worldwide lab The work is organized into seven key parts each contributing to a comprehensive understanding of the IoP Part I lays the foundation with interdisciplinary visions and concepts Part II delves into IoP s infrastructure encompassing digital shadows and actionable artificial intelligence Part III

examines materials within the digitalized production landscape Part IV confronts the challenges and potentials of production processes under novel digitalization methods Part V focuses on production management with data driven decision support while Part VI explores agile development processes Finally Part VII delves into the interplay between internal and external perspectives in the IoP human centered work design and platform based ecosystems Supported by the German Research Foundation DFG this compendium redefines manufacturing through the transformative IoP lens Embrace this scholarly endeavor to embrace technological advancement This is an open access book

The Design of Aircraft Landing Gear
Robert Kyle Schmidt, 2021-02-18 The aircraft landing gear and its associated systems represent a compelling design challenge simultaneously a system a structure and a machine it supports the aircraft on the ground absorbs landing and braking energy permits maneuvering and retracts to minimize aircraft drag Yet as it is not required during flight it also represents dead weight and significant effort must be made to minimize its total mass The Design of Aircraft Landing Gear written by R Kyle Schmidt PE B A Sc Mechanical Engineering M Sc Safety and Aircraft Accident Investigation Chairman of the SAE A 5 Committee on Aircraft Landing Gear is designed to guide the reader through the key principles of landing system design and to provide additional references when available Many problems which must be confronted have already been addressed by others in the past but the information is not known or shared leading to the observation that there are few new problems but many new people The Design of Aircraft Landing Gear is intended to share much of the existing information and provide avenues for further exploration The design of an aircraft and its associated systems including the landing system involves iterative loops as the impact of each modification to a system or component is evaluated against the whole It is rare to find that the lightest possible landing gear represents the best solution for the aircraft the lightest landing gear may require attachment structures which don't exist and which would require significant weight and compromise on the part of the airframe structure design With those requirements and compromises in mind The Design of Aircraft Landing Gear starts with the study of airfield compatibility aircraft stability on the ground the correct choice of tires followed by discussion of brakes wheels and brake control systems Various landing gear architectures are investigated together with the details of shock absorber designs Retraction kinematics and mechanisms are studied as well as possible actuation approaches Detailed information on the various hydraulic and electric services commonly found on aircraft and system elements such as dressings lighting and steering are also reviewed Detail design points the process of analysis and a review of the relevant requirements and regulations round out the book content The Design of Aircraft Landing Gear is a landmark work in the industry and a must read for any engineer interested in updating specific skills and students preparing for an exciting career

Unsettled Technology Domains in Robotics for Automation in Aerospace Manufacturing Jody Muelaner, 2019-12-20 Cost reduction and increasing production rates are driving automation of aerospace manufacturing Articulated serial robots may replace bespoke gantry automation or human operations Improved accuracy is key to enabling operations such as machining additive manufacturing AM composite fabrication drilling automated program development and inspection New accuracy standards are needed to enable process relevant comparisons between robotic systems Accuracy can be improved through calibration of kinematic and joint stiffness parameters joint output encoders adaptive control that compensates for thermal expansion and feedforward control that compensates for hysteresis and external loads The impact of datuming could also be significantly reduced through modeling and optimization Highly dynamic end effectors compensate high frequency disturbances using inertial sensors and reaction masses Global measurement feedback is a high accuracy turnkey solution but it is costly and has limited capability to compensate dynamic errors Local measurement feedback is a mature affordable and highly accurate technology where the robot is required to position or align relative to some local feature Locally clamped machine tools are an alternative approach that can utilize the flexibility of industrial robots while also enabling high quality machined surfaces Hybrid high accuracy control strategies will be required for many processes NOTE SAE EDGE Research Reports are intended to identify and illuminate key issues in emerging but still unsettled technologies of interest to the mobility industry The goal of SAE EDGE
