This book is organized into 12 chapters and begins with an overview of the structure and function of skin and then discusses the epidermis and its structural features. Special consideration is given to the life cycle of epidermal cells, the properties and function of stratum corneum, and other cells in the epidermis including melanocytes, the cells of Langerhans, and Merkel cells. The chapters that follow focus on age-related changes in the dermis, cutaneous blood flow, changes in skin circulation, and the dermal nerve network. The book also considers hair growth and differentiation, the effects of malnutrition on the morphology of hair roots, and the structure and development of the nails.
