

Anatomy of the Heart

Blood Flow through the Heart

The superior vena cava receives blood from the head, neck, upper limbs, and chest. The inferior vena cava receives blood from the trunk, viscera, and lower limbs. The deoxygenated venous blood travels into the right atrium, then into the right ventricle through the tricuspid valve, and is pumped out through the pulmonary artery to the lungs. In the lungs, the blood is oxygenated and returns to the left atrium. From there, it enters the left ventricle through the mitral/bicuspid valve and then exits the heart through the aortic valve where the oxygenated blood is distributed to the rest of the body.
