Index of Patents Issued from the United States Patent and Trademark Office , **Legal Regulation of Corporate Social Responsibility** Mia Mahmudur Rahim,2013-11-27 Even though Corporate Social Responsibility CSR has become a widely accepted concept promoted by different stakeholders business corporations internal strategies known as

corporate self regulation in most of the weak economies respond poorly to this responsibility Major laws relating to corporate regulation and responsibilities of these economies do not possess adequate ongoing influence to insist on corporate self regulation to create a socially responsible corporate culture This book describes how the laws relating to CSR could contribute to the inclusion of CSR principles at the core of the corporate self regulation of these economies in general without being intrusive in normal business practice It formulates a meta regulation approach to law particularly by converging patterns of private ordering and state control in contemporary corporate law from the perspective of a weak economy It proposes that this approach is suitable for alleviating regulators limited access to information and expertise inherent limitations of prescriptive rules ensuring corporate commitment and enhance the self regulatory capacity of companies This book describes various meta regulation strategies for laws to link social values to economic incentives and disincentives and to indirectly influence companies to incorporate CSR principles at the core of their self regulation strategies It investigates this phenomenon using Bangladesh as a case study

Aircraft Surveillance Systems Busyairah Syd Ali, 2017-11-06 The Communication Navigation and Surveillance CNS systems provide air traffic controllers with the information necessary to ensure the specified separation between aircraft and efficient management of airspace as well as assistance to flight crew for safe navigation. However, the radar systems that support air traffic management ATM and in particular air traffic control ATC are at their operational limit. This is particularly acute in the provision of the ATC services in low altitude remote and oceanic areas. Limitations in the current surveillance systems include unavailability of services in oceanic and remote areas, limited services during extreme weather conditions, and outdated equipment with limited availability of spare parts to support system operation. These limitations have resulted in fatal accidents. This book addresses the limitations of radar to support ATC in various operational environments identified and verified by analysing five years of safety data from Avinor, the Air Navigation Service Provider ANSP in Norway. It derives a set of taxonomy and from this develops a causal model for incident accident due to limitations in the surveillance system. The taxonomy provides a new method for ANSPs to categorize incidents while the causal model is useful for incident accident investigations. The book also provides theoretical justifications for the use of Automatic Dependent Surveillance Broadcast ADS-B to overcome the limitations of radar systems and identify areas of improvements to enable seamless ATC services. Written in a style that makes it accessible to non-specialists, *Aircraft Surveillance Systems* will be of interest to many in the field of aviation, particularly ATM safety and accident investigation. It will also offer a useful reference on this vital topic for air traffic management courses.

streamlined format makes it easy to find the exact information quickly and conveniently Includes access to a companion Web site for additional resources **Coupling models by routing communication through a database** Eric Solano,Robert J. Morris,Georgiy V. Bobashev,2013-09-17 As the number of available large and many faceted computer models continues to increase simulating complex systems by coupling existing models of smaller subsystems becomes more attractive because of advantages such as leveraging existing programming Advances in computational technologies also contribute to the increased feasibility of coupled systems Although coupled systems may be used to study new problems that their constituent models could not address the coupling process brings its own challenges The modeler may face the task of coupling models from a heterogeneous environment of development platforms programming languages and model assumptions Moreover the modeler may wish to allow constituent models to be replaced or upgraded without significant difficulty We discuss a model coupling approach that attempts to address these issues In our approach the models run as separate executable processes and store data in a database for later retrieval by other models While the approach does not prescribe any particular database design we do suggest elements that are likely to appear We describe a proof of concept application of the approach and evaluate how well our approach meets its goals
