Knowledge is not merely everything we have come to know but also ideas we have pondered long enough to know in which way they are related and 1 how these ideas can be put to practical use Modern aviation has been made possible as a result of much scientific search However the very first useful results of this research became available a considerable length of time after the aviation pioneers had made their first flights Apparently researchers were not able to find an adequate explanation for the occurrence of lift until the beginning of the 21st century Also for the fundamentals of stability and control there was no theory available that the pioneers could rely on Only after the first motorized flights had been successfully made did researchers become more interested in the science of aviation which from then on began to take shape In modern day life many millions of passengers are transported every year by air People in the western societies take to the skies on average several times a year Especially in areas surrounding busy airports travel by plane has been on the rise since the end of the Second World War Despite becoming familiar with the sight of a jumbo jet commencing its flight once or twice a day many find it astonishing that such a colossus with a mass of several hundred thousands of kilograms can actually lift off from the ground
