Vincenzi, Katherine Lemos, Shawn Pruchnicki, 2025-09-16 Developing training and simulation is a complex business From understanding human performance design usability and the limitations of training types to considerations with virtual reality VR producing realistic scenarios and even helping accident investigations leaves the practitioner with almost an overwhelming challenge However they know that their goal is to cut out developing methods that can train and test the sharp end professional to be ready for any eventuality whether in the air a chemical plant or the

operating room Through chapters written by leading experts this book aims to address the key questions and concerns when developing training and simulation in high risk industries This book identifies unexplored challenges and weaknesses in the aviation domain including ground based training and flight simulation compared to the real world of in flight complex aircraft operations aviation accidents and incidents airspace and air traffic control aeronautical communications air navigation aircraft automation and pilot certification and testing These concerns are not just relevant to aviation however This book pushes beyond aviation to include other fields including petrochemical and medicine that while on the surface are different include some of the same human and organizational challenges It integrates machine challenges with human factors science and includes a view of the corporate influences on training Safety is a consideration in all the challenges and current limitations in training and simulation and the book is written with the intention of improving both training and safety as industries deal with more and more complex advanced technology Underpinned by case studies and real life examples this book will give the reader a thorough overview of the limitations of current training methods but with a view to improving and developing better methods for future training scenarios Opportunities and solutions are presented for current or future research and the application and incorporation of these in day day operations Training and Simulation Processes Challenges and Solutions will appeal to practitioners of human factors training pilots and ground operators engineers involved in systems design safety specialists test evaluators and accident investigators across multiple domains

Smart Intelligent Aircraft Structures (SARISTU) Piet Christof Wölcken, Michael Papadopoulos, 2015-09-04 The book includes the research papers presented in the final conference of the EU funded SARISTU Smart Intelligent Aircraft Structures project held at Moscow Russia between 19 21 of May 2015 The SARISTU project which was launched in September 2011 developed and tested a variety of individual applications as well as their combinations With a strong focus on actual physical integration and subsequent material and structural testing SARISTU has been responsible for important progress on the route to industrialization of structure integrated functionalities such as Conformal Morphing Structural Health Monitoring and Nanocomposites The gap and edge free deformation of aerodynamic surfaces known as conformal morphing has gained previously unrealized capabilities such as inherent de icing erosion protection and lightning strike protection while at the same time the technological risk has been greatly reduced Individual structural health monitoring techniques can now be applied at the part manufacturing level rather than via extending an aircraft s time in the final assembly line And nanocomposites no longer lose their improved properties when trying to upscale from neat resin testing to full laminate testing at element level As such this book familiarizes the reader with the most significant developments achievements and key technological steps which have been made possible through the four year long cooperation of 64 leading entities from 16 different countries with the financial support of the European Commission

Advanced Approach Light System Behrend, Ferdinand, 2017-08-25 The constant growth in aviation requires the introduction of new technologies in order to meet the

demand for increasing capacity Especially the airport often represents the limiting factor Poor visibility conditions and an insufficiently equipped ground infrastructure regarding navigation facilities can lead to restrictions in maintaining the prevailing traffic flow especially during the approaches The conventional instrument landing system consists of numerous technical components which are causing expenses regarding maintenance and operation Smaller airports are often only partially or not at all equipped with the appropriate ground facilities This can bring air traffic to a total halt during certain visibility conditions New satellite based approach procedures offer the possibility to keep up air traffic even during poor visibility conditions regardless of the ground infrastructure required in the past These also offer now a barometric guidance or an augmented satellite signal for the vertical flight guidance component With the use of these approach procedures there is however the possibility of new faults and errors of the vertical flight guidance signal In a system based on electromagnetic radio waves a fault is angular meaning if the airplane gets nearer to the transmitter on ground the absolute possible failure of the target approach path gets smaller In a satellite based approach on the other hand it is constant during the whole approach The result can be a great deviation from the target approach path even just before reaching the runway threshold Often only after reaching the decision height and the herewith connected visual contact to corresponding ground features these faults can be recognized during poor visibility conditions close to the minima of a precision approach flight The larger the absolute error to the target approach path the more crucial it gets to initiate a missed approach procedure and therefore preventing a drop out of the relevant obstacle clearance limit Research has shown that through the currently present visual characteristics of the approach lighting system the actual position cannot be determined sufficiently regarding the runway threshold and the target approach path in order to estimate the decision height correctly The here presented Advanced Approach Light System is supposed to be an additional visual aid in order to support the cockpit crew in its decisions Therefore it should amount to improve the awareness of the situation regarding constant vertical faults The new navigation lighting system has been integrated into a flight simulator and was tested by licensed airline pilots within two test series with varying visibility conditions and decision heights Next to basic functionality operational usability in existing procedures of practical routines in the cockpit has been evaluated The results of the test series have demonstrated a significant improvement in identifying vertical faults with the support of the Advanced Approach Light System The decision to initiate a missed approach was made immediate and prompt and therefore the airplane stayed within the obstacle clearance limit even in a low decision height In contrast the trial participants without the new system took reluctant and often far too late decisions which lead to a drop out of the obstacle clearance limit The Advanced Approach Lighting System has significantly improved the situation awareness for pilots in command in recognizing vertical faults when reaching the decision height The integration in existing work routines and its operative use happened flawlessly and was highly accepted by the trial participants Das stetige Wachstum in der Luftfahrt erfordert die Einf hrung neuer Technologien um der Nachfrage nach

steigender Kapazität gerecht zu werden. Insbesondere das System Flughafen stellt hierbei oftmals den limitierenden Faktor dar. Schlechte Sichtbedingungen und die unzureichende bodenseitige Ausrüstung mit Navigationseinrichtungen können für Einschränkungen in der Aufrechterhaltung des bestehenden Verkehrsflusses sorgen, insbesondere bei Landeanflügen. Das konventionelle Instrumentenlandesystem besteht aus einer Vielzahl an technischer Komponenten, die hohen Aufwand hinsichtlich Wartung und Betrieb verursachen. Kleine Flughäfen sind oft nur teilweise oder gar nicht mit den entsprechenden Bodenkomponenten ausgerüstet, so dass der Flugbetrieb bei bestimmten Sichtbedingungen vollständig eingestellt werden muss. Neue satellitengestützte Anflugverfahren bieten die Möglichkeit, den Flugbetrieb auch bei schlechten Sichtbedingungen aufrechtzuerhalten, unabhängig von der bisher notwendigen Bodeninfrastruktur. Diese bieten mittlerweile ebenso eine auf der barometrischen Höhenmessung oder einem aufgewerteten Satellitensignal basierende vertikale Flugführungskomponente. Allerdings besteht mit der Verwendung entsprechender Anflugverfahren auch eine neue mögliche Fehlercharakteristik des vertikalen Flugführungssignals. Ist ein Fehler beim auf elektromagnetischen Funkwellen basierenden Instrumentenlandesystem winkelförmig, dann je näher sich das Luftfahrzeug dem Sender am Boden nähert, umso kleiner wird die absolute Ablage zum Sollanflugweg. Ist dieser bei satellitengestützten Anflügen konstant über den gesamten Endanflug. Eine große Abweichung vom Sollanflugweg auch kurz vor Erreichen der Landebahnschwelle kann die Folge sein. Bei schlechten Sichtbedingungen nahe den Minima eines Präzisionsanfluges kann der Fehler oft erst bei Erreichen der Entscheidungshöhe und dem damit verbundenen visuellen Kontakt zu entsprechenden Bodenmerkmalen erkannt werden. Je größer die Ablage zum Sollanflugweg, umso entscheidender ist das unverzügliche Einleiten des Fehlanfluges, um ein Verlassen der entsprechenden Hindernisfreibereiche zu verhindern. Untersuchungen haben gezeigt, dass die aktuell vorhandenen visuellen Merkmale der Anflugbefeuerung nicht ausreichend sein können, die tatsächliche Position bezüglich der Landebahnschwelle und des Sollanflugweges bei Erreichen der Entscheidungshöhe einzuschätzen. Das hier vorgestellte Advanced Approach Light System soll die Cockpitbesatzung als zusätzliches visuelles Merkmal bei der Entscheidung unterstützen und so zur Verbesserung des Situationsbewusstseins hinsichtlich konstanter vertikaler Fehler beitragen. Das neue Befeuerungssystem wurde in einen Flugsimulator integriert und innerhalb zweier Versuchsreihen mit unterschiedlichen Sichtbedingungen und Entscheidungshöhen von lizenzierten Verkehrspiloten getestet. Dabei sollte neben der grundsätzlichen Funktionalität auch die operative Einsetzbarkeit in den bestehenden Ablauf der Handlungsrouinen im Cockpit untersucht werden. Die Ergebnisse der Versuchsreihen haben eine erhebliche Verbesserung im Erkennen vertikaler Fehler mit Hilfe des Advanced Approach Light System aufgezeigt. Die Entscheidung zum Einleiten des Fehlanfluges erfolgte direkt und unverzüglich, wodurch das Luftfahrzeug auch bei sehr niedriger Entscheidungshöhe noch innerhalb des Hindernisfreibereiches blieb. Im Gegensatz dazu wurde bei den Versuchsteilnehmern, denen nicht das neue System zur Verfügung stand, die Entscheidung eher zögerlich und oftmals viel später getroffen, was zu einem Verlassen des Hindernisfreibereiches führte. Das Situationsbewusstsein der

Luftfahrzeugführer zum Erkennen vertikaler Fehler beim Erreichen der Entscheidungshöhe wurde durch das Advanced Approach Light System wesentlich erhöht. Die Integration in bestehende Arbeitsroutinen und der operative Einsatz erfolgten bei hoher Akzeptanz problemlos durch die Versuchsteilnehmer. *Plane Crash* George Bibel, Robert Hedges, 2018-03-14
