Aircraft Structural Repair Design:

Low-Cost Aircraft Structural Repair and Maintenance Study W. D. Dotseth, R. W. Nickel, W. E. Routh, ROCKWELL INTERNATIONAL LOS ANGELES CALIF LOS ANGELES AIRCRAFT DIV., 1977 This report documents the research and analysis conducted to 1 identify high cost structural repair and maintenance items in existing U S military aircraft 2 conduct a design study on means to reduce life cycle costs for a number of selected structural problems on fighter bomber and cargo tanker class aircraft and 3 to develop a design handbook to provide guidance and information on methods to reduce aircraft structure cost of ownership This program was limited to existing military aircraft metallic type structures since separate programs for adhesively bonded and advanced composite structure design and repair are being developed by the Structures Division FBS of the Air Force Flight Dynamics Laboratory The design handbook has been published as document No AFFDL TR 76 72 Aircraft Structural Design Handbook for Lower Cost Maintenance and Repair Author **Bonded Repair of Aircraft Structures** A. Baker, Jones, 2012-12-06 The conventional approach to through life support for aircraft structures can be divided into the following phases i detection of defects ii diagnosis of their nature and significance iii forecasting future behaviour prognosis and iv pre scription and implementation of remedial measures including repairs Considerable scientific effort has been devoted to developing the science and technology base for the first three phases Of particular note is the development of fracture mechanics as a major analytical tool for metals for predicting residual strength in the presence of cracks damage tolerance and rate of crack propagation under service loading Intensive effort is currently being devoted to developing similar approaches for fibre composite structures particularly to assess damage tolerance and durability in the presence of delamination damage Until recently there has been no major attempt to develop a science and tech nology base for the last phase particularly with respect to the development of repairs Approaches are required which will allow assessment of the type and magnitude of defects amenable to repair and the influence of the repair on the stress intensity factor or some related parameter Approaches are also required for the development and design of optimum repairs and for assessment of their durability **Scientific and Technical Aerospace Reports** , 1995-08 Proceedings of the International Conference on Aerospace System Science and Engineering 2019 Zhongliang Jing, 2020-02-29 This book presents the proceedings of the International Conference on Aerospace System Science and Engineering ICASSE 2019 held in Toronto Canada on July 30 August 1 2019 and jointly organized by the University of Toronto Institute for Aerospace Studies UTIAS and the Shanghai Jiao Tong University School of Aeronautics and Astronautics ICASSE 2019 provided a forum that brought together experts on aeronautics and astronautics to share new ideas and findings These proceedings present high quality contributions in the areas of aerospace system science and engineering including topics such as trans space vehicle system design and integration air vehicle systems space vehicle systems near space vehicle systems aerospace robotics and unmanned systems communication navigation and surveillance aerodynamics and aircraft design dynamics and

Rose, Rhys Jones, 2003-01-23 The availability of efficient and cost effective technologies to repair or extend the life of aging military airframes is becoming a critical requirement in most countries around the world as new aircraft becoming prohibitively expensive and defence budgets shrink To a lesser extent a similar situation is arising with civil aircraft with falling revenues and the high cost of replacement aircraft This book looks at repair reinforcement technology which is based on the use of adhesively bonded fibre composite patches or doublers and can provide cost effective life extension in many situations From the scientific and engineering viewpoint whilst simple in concept this technology can be quite challenging particularly when used to repair primary structure This is due to it being based on interrelated inputs from the fields of aircraft design solid mechanics fibre composites structural adhesive bonding fracture mechanics and metal fatigue The technologies of non destructive inspection NDI and more recently smart materials are also included Operational issues are equally critical including airworthiness certification application technology including health and safety issues and training Including contributions from leading experts in Canada UK USA and Australia this book discusses most of these issues and the latest developments Most importantly it contains real histories of application of this technology to both military and civil aircraft *Polymer Matrix Composites: Materials Usage, Design, and Analysis* Composite Materials Handbook - 17 (CMH-17), 2025-10-16 The third volume of this six volume compendium provides methodologies and lessons learned for the design analysis manufacture and field support of fiber reinforced polymeric matrix composite structures It also provides guidance on material and process specifications and procedures for using the data that is presented in Volume 2 The information provided is consistent with the guidance provided in Volume 1 and is an extensive compilation of the current knowledge and experiences of engineers and scientists from industry government and academia who are active in composites The Composite Materials Handbook referred to by industry groups as CMH 17 is a six volume engineering reference tool that contains over 1 000 records of the latest test data for polymer matrix metal matrix ceramic matrix and structural sandwich composites CMH 17 provides information and guidance necessary to design and fabricate end items from composite materials It includes properties of composite materials that meet specific data requirements as well as guidelines for design analysis material selection manufacturing quality control and repair The primary purpose of the handbook is to standardize engineering methodologies related to testing data reduction and reporting of property data for current and emerging composite materials It is used by engineers worldwide in designing and fabricating products made from composite materials ISBN 9781468609981 9781468609998 DOI <https://doi.org/10.4271/R.640> Structural Sandwich Composites Composite Materials Handbook - 17 (CMH-17), 2013-09-18 The last volume of this six volume compendium is an update to the cancelled Military Handbook 23 which was prepared for use in the design of structural sandwich polymer composites primarily for flight vehicles The

information presented includes test methods material properties design and analysis techniques fabrication methods quality control and inspection procedures and repair techniques for sandwich structures in military and commercial vehicles The Composite Materials Handbook referred to by industry groups as CMH 17 is a six volume engineering reference tool that contains over 1 000 records of the latest test data for polymer matrix metal matrix ceramic matrix and structural sandwich composites CMH 17 provides information and guidance necessary to design and fabricate end items from composite materials It includes properties of composite materials that meet specific data requirements as well as guidelines for design analysis material selection manufacturing quality control and repair The primary purpose of the handbook is to standardize engineering methodologies related to testing data reduction and reporting of property data for current and emerging composite materials It is used by engineers worldwide in designing and fabricating products made from composite materials

This document has been prepared to serve a growing need in the military to reduce aircraft structural maintenance costs to a more reasonable level commensurate with acceptable life cycle costs It is designed as an informative guide which will aid the aircraft designer in foreseeing maintenance problems and make proper trade off evaluations to optimize the structural design for total life cycle costs The handbook points up several examples of high maintenance cost items on existing in service aircraft and suggests changes to substantially reduce the life cycle cost In addition many other costly maintenance items discovered during visits to military and industry maintenance and repair facilities are cited which could have been avoided or substantially reduced by more cost effective considerations for serviceability during design In this respect the handbook includes not only information on past problem areas in the form of lessons learned but recommended considerations during initial design of every aspect of structural development Since corrosion damage repair was found to be one of the most costly maintenance items a part of the handbook provides design information usable in its prevention Also since the handbook is directed primarily toward the development of military aircraft a section is devoted to battle damage and design considerations to increase survivability and permit repairs to minimize downtime on the aircraft [Federal Register](#)
