$$(4x^2+1)(4x^2-1) = 0$$

$$x = -\frac{1}{2}, \frac{1}{2}$$

• $2x^3 - 5x^2 + 18x - 45$

O. Bird, 2003 Engineering Mathematics is a comprehensive pre degree maths text for vocational courses and foundation modules at degree level in the U K John Bird s approach based on numerous worked examples supported by problems is ideal for students of a wide range of abilities and can be worked through at the student s own pace Theory is kept to a minimum placing a firm emphasis on problem solving skills and making this a thoroughly practical introduction to the core mathematics needed for engineering studies and practice Throughout the book assessment papers are provided that are ideal for use as tests or homework These are the only problems where answers are not provided in the book Full worked solutions are available to lecturers only as a free download from the Newnes website www.newnespress.com *Partially Specified Matrices and Operators: Classification, Completion, Applications* Israel Gohberg, Marinus Kaashoek, Frederik Van Schagen, 2012-12-06 This book is devoted to a new direction in linear algebra and operator theory that deals with the invariants of partially specified matrices and operators and with the spectral analysis of their completions The theory developed centers around two major problems concerning matrices of which part of the entries are given and the others are unspecified The first is a classification problem and aims at a simplification of the given part with the help of admissible similarities The results here may be seen as a far reaching generalization of the Jordan canonical form The second problem is called the eigenvalue completion problem and asks to describe all possible eigenvalues and their multiplicities of the matrices which one obtains by filling in the unspecified entries Both problems are also considered in an infinite dimensional operator framework A large part of the book deals with applications to matrix theory and analysis namely to stabilization problems in mathematical system theory to problems of Wiener Hopf factorization and interpolation for matrix polynomials and rational matrix functions to the Kronecker structure theory of linear pencils and to non everywhere defined operators The eigenvalue completion problem has a natural associated inverse which appears as a restriction problem The analysis of these two problems is often simpler when a solution of the corresponding classification problem is available A Singular Introduction to Commutative Algebra
