

Conclusion

Undoubtedly, AMD64 architecture offered by AMD Company turned out to be needed on market. AMD64's advantage is that it allows you to smoothly switch to 64-bit programs without losing compatibility with obsolete 32-bit applications. But there is nothing revolutionary in AMD64.

Migration of 32-bit programs on AMD64, as experiments demonstrate, allows you, firstly, to solve tasks which are much more memory-demanding and, secondly, get about 30% performance gain "just so" without changing code due to optimization of an application by the compiler for the new architecture.

We may conclude that AMD64 architecture postponed the problem of limited available main-memory size for many years but didn't solve the problem of modern personal computers' performance gain. The future is still with multi-core and multi-processor systems.
