CHAPTER 3 EXERCISES

For the exercises in this chapter, you will use the GSS dataset (file name: gss.dta).

1. (Dataset: GSS. Variables: polviews, wtss.) The GSS dataset contains polviews, which measures political ideology—the extent to which individuals “think of themselves as liberal or conservative.” Here is how polviews is coded (the labels are fully written out):

Numeric Code	Value Label
1	Extremely liberal
2	Liberal
3	Slightly liberal
4	Moderate
5	Slightly conservative
6	Conservative
7	Extremely conservative

- A. Apply the **Analyze ► Descriptive Statistics ► Frequencies** procedure to polviews, making sure to weight the data using the wtss variable. Eyeball the percent column and make some rough-and-ready estimates.

The percentage of respondents who are either “extremely liberal,” “liberal,” or “slightly liberal” is (circle one)

about 18 percent. about 28 percent.
 about 38 percent.

The percentage of respondents who are either “slightly conservative,” “conservative,” or “extremely conservative” is (circle one)

about 10 percent. about 20 percent.
 about 30 percent.

- B. Use polviews and the **Transform ► Recode into Different Variables** procedure to create a new variable named polview3. Give polview3 this label: “Ideology: 3 categories.” Collapse the three liberal codes into one category (coded 1 on polview3), put the moderates

into their own category (coded 2 on polview3), and collapse the three conservative codes into one category (coded 3 on polview3). Don’t forget to recode missing values on polviews into missing values on polview3. Run **Frequencies** on polview3.

The percentage of respondents who are coded 1 on polview3 is (fill in the blank) _____ percent.

The percentage of respondents who are coded 2 on polview3 is (fill in the blank) _____ percent.

Make sure that the two percentages you wrote down in part B match the percentages you recorded in part A. The numbers may be slightly different and may still be considered a match. If the two sets of numbers match, proceed to part C. If they do not match, you performed the recode incorrectly. Review this chapter’s discussion of the Recode procedure and try the recode again.

- C. In the Variable View of the Data Editor, change Decimals to 0, and then click in the Values cell and supply the appropriate labels for the numeric codes of the new polview3 variable: “Liberal” for code 1, “Moderate” for code 2, and “Conservative” for code 3. Run the **Analyze ► Descriptive Statistics ► Frequencies** procedure on polview3. Use your results to fill in the table below.

Ideology: Three Categories	Frequency ^a	Percent	Cumulative Percent
Liberal	?	?	?
Moderate	?	?	?
Conservative	?	?	100.00%
Total	?	100.00%	

^aRound weighted frequencies to two decimal places.

2. (Dataset: GSS. Variables: colmslm, libmslm, splmslm, wtss.) The GSS dataset contains three variables that gauge tolerance toward “anti-American Muslim clergymen”—whether they should be allowed to teach in college (colmslm), whether their books should be removed from the library (libmslm), and whether they should be allowed

Answers For Exercises In Spss Companion
