

IV. Developmental Aspects of the Nervous System

TYPES OF CEREBRAL PALSY

Cerebral refers to the affected area of the brain, the cerebrum, and palsy refers to disorder of movement. Cerebral palsy is caused by damage to the motor control centers of the young developing brain and can occur during pregnancy, during childbirth, or after birth up to about age three.

- A. The nervous system begins to form in the first month of embryonic development. Therefore maternal and environmental factors may impair brain development. Mothers that smoke impair the bodies ability to carry oxygen sufficiently which increased the chances of oxygen deprivation to the babies brain cells that are forming. Other severe congenital brain disorders include cerebral palsy which is thought to be caused by a temporary lack of oxygen during delivery. Furthermore, premature babies have trouble regulating their temperature because the hypothalamus is one of the last brain areas to mature prenatally.
- B. The development of motor control indicates the progressive myelination and maturation of a child's nervous system.
