Barnyards and Birkenstocks Don Stuart, 2021-09-24

Rural America is struggling The average farmer is now 57 years old Family agriculture is gradually fading and prime farmland is often converted into environmentally harmful applications But food cultivation has ecological consequences too Farms consume 80 percent of the nation's water Although they often prevent sprawling development improve water quality or provide wildlife habitat they also pollute rivers drain wetlands or emit destructive greenhouse gasses Don Stuart believes two dangerous trends the loss of farms and damage to ecosystems are connected and that a major cause is the political deadlock between farmers and environmental activists He offers a radical proposal collaboration To promote empathy and point out the costs of continued political impasse he presents opposing perspectives Topics include incentives regulations

government spending environmental markets growth management climate change public lands grazing and the federal farm bill Drawing from multiple case studies and a lifetime spent settling conflicts the author identifies characteristics of successful community programs to suggest a model for a prosperous healthy future *Odour Impact Assessment Handbook* Vincenzo Belgiorno,Vincenzo Naddeo,Tiziano Zarra,2013-01-29 Odours have become a priority concern for facility operators engineers and urban planners who deal with waste and industrial treatment plants The subjectivity of smell perception its variability due to frequency and weather conditions and the complex nature of the substances involved has long hampered the regulation of odour emissions This book provides a comprehensive framework for the assessment measurement and monitoring of odour emissions and covers Odour characterization and exposure effects Instruments and methods for sampling and measurement Strategies for odour control Dispersion modelling for odour exposure assessment Odour regulations and policies Procedures for odour impact assessment Case studies Wastewater treatment composting industrial and CAFO plants and landfill Intended for researchers in environmental chemistry environmental engineering and civil engineering this book is also an invaluable guide for industry professionals working in wastewater treatment environmental and air analysis and waste management *Treatment of Industrial Effluents* Mihir Kumar Purkait,Piyal Mondal,Chang-Tang Chang,2019-09-06 To address the issue of discharge of untreated industrial effluent in the water body causing pollution adoption of cleaner production technologies and waste minimization initiatives are being encouraged The book explains each related technology elaborately and critically analyses the same from practical application point of view In depth characterization environmental and health effects and treatment of various industrial effluents are discussed with case studies Limitations challenges and remedial actions to be taken are included at the end of each chapter Chapters are arranged as per specific type of effluents from various industries like textile tannery leather plant and oil refinery Major Studies & Issue Briefs of the Congressional Research Service, Bibliography & Indexes to the ... Supplement ,2005 Air Quality Issues and Animal Agriculture Claudia Copeland,Resources, Science, and Industry Division,2005 This report focuses on the environmental quality of water resources as affected by animal agriculture specifically animal waste which can harm water quality through surface runoff direct discharges spills and leaching into soil and groundwater This report also discusses the contribution of emissions from animal feeding operations AFO enterprises where animals are raised in confinement to air pollution **Air Quality Issues and Animal Agriculture** ,2007 **Northeastern Geology and Environmental Sciences** ,1999 *Air Quality Issues and Animal Agriculture* ,2016 **Air Quality Issues and Animal Agriculture** ,2007 From an environmental quality standpoint much of the interest in animal agriculture has focused on impacts on water resources because animal waste if not properly managed can harm water quality through surface runoff direct discharges spills and leaching into soil and groundwater A more recent issue is the contribution of emissions from animal feeding operations AFO enterprises where animals are raised in confinement to air pollution AFOs can affect air

quality through emissions of gases such as ammonia and hydrogen sulfide particulate matter volatile organic compounds hazardous air pollutants and odor These pollutants and compounds have a number of environmental and human health effects Agricultural operations that emit large quantities of air pollutants may be subject to Clean Air Act regulation Further some livestock operations also may be regulated under the release reporting requirements of the Comprehensive Environmental Response Compensation and Liability Act Superfund and the Emergency Planning and Community Right to Know Act Questions about the applicability of these laws to livestock and poultry operations have been controversial and have drawn congressional attention Enforcement of these federal environmental laws requires accurate measurement of emissions to determine whether regulated pollutants are emitted in quantities that exceed specified thresholds Yet experts believe that existing data provide a poor basis for regulating and managing air emissions from AFOs In an effort to collect scientifically credible data in January 2005 the Environmental Protection Agency EPA announced a plan that had been negotiated with segments of the animal agriculture industry Called the Air Compliance Agreement it is intended to produce air quality monitoring data on AFO emissions during a two year study while at the same time protecting participants through a safe harbor from liability under certain provisions of federal environmental laws Participants will pay a civil penalty of about 500 per farm and will contribute 2 500 per farm for the monitoring program which is expected to begin in 2007 Many producer groups support the agreement as essential to gathering valid data that are needed for decision making However critics including environmentalists and state and local air quality officials say that the Air Compliance Agreement will grant all participating animal producers a sweeping retrospective and prospective liability shield for violations of environmental laws yet because fewer than three dozen farms will be monitored it is too limited in scope to yield scientifically credible estimates of AFO emissions Some industry groups have their own questions and reservations Nearly 2 700 AFOs representing more than 6 700 farms signed up to participate in the agreement In August 2006 EPA finished approving agreements with 2 568 AFOs This report reviews key issues associated with the Air Compliance Agreement It will be updated as warranted by events Background information on air emissions from poultry and livestock operations relevant federal environmental laws and regulations congressional interest state activities and research needs are discussed in CRS Report RL32948 Air Quality Issues and Animal Agriculture A Primer
