

MCV4U1 - Culminating Performance Task

Part 1

(approximately 2.5 hours)

In Part 1 of the CPT, you will be creating a "Study Guide" for the ways to evaluate limits and all of the "rules" we learned about when taking derivatives of functions. You can create this study guide however you like - on paper, on computer (Google Slides, Prezi), in a Mind Map. Whatever format you like is acceptable. You may want to check with me first.

Part A: Limits (approx. 75 min.)

The very essence of Calculus is the Limit! As we approach the limiting value of a function, we can understand the change that is occurring over an interval approaching infinity.

In your study guide, your job is to complete the following:

1. Include the definition of a limit.
2. Include the essential purpose of a limit.
3. Explain continuity.
4. Show how to algebraically determine limits.

For each category, please show one example that is different from the example your teacher used in class (and in the notes).

Please ensure that you have your own unique example, different from that of another student. It is fine if you work with someone, but you should have your own example.
