

Steps to solving Systems of Equations by Substitution:

$$x + 3y = 6$$

$$2x + 8y = -12$$

1. Isolate a variable in one of the equations. (Either $y =$ or $x =$).

$$x + 3y = 6$$

$$x = 6 - 3y$$

2. Substitute the isolated variable in the other equation.

$$2x + 8y = -12$$

$$2(6 - 3y) + 8y = -12$$

3. This will result in an equation with one variable. Solve the equation.

$$12 - 6y + 8y = -12$$

$$2y = -24$$

$$y = -12$$

4. Substitute the solution from step 3 into another equation to solve for the other variable.

$$x + 3(-12) = 6$$

$$x = 42$$

5. Recommended: Check the solution.

$$42 = 6 - 3(-12)$$

Substitution Dynamical Systems - Spectral Analysis Martine Queffélec,2010-01-30 This volume mainly deals with the dynamics of finitely valued sequences and more specifically of sequences generated by substitutions and automata Those sequences demonstrate fairly simple combinatorial and arithmetical properties and naturally appear in various domains As the title suggests the aim of the initial version of this book was the spectral study of the associated dynamical systems the first chapters consisted in a detailed introduction to the mathematical notions involved and the description of the spectral invariants followed in the closing chapters This approach combined with new material added to the new edition results in a nearly self contained book on the subject New tools which have also proven helpful in other contexts had to be developed for this study Moreover its findings can be concretely applied the method providing an algorithm to exhibit the spectral measures and the spectral multiplicity as is demonstrated in several examples Beyond this advanced analysis many readers will benefit from the introductory chapters on the spectral theory of dynamical systems others will find complements on the spectral study of bounded sequences finally a very basic presentation of substitutions together with some recent findings and questions rounds out the book
