Graph Coloring Problems Tommy R. Jensen, Bjarne Toft, 2011-10-24 Contains a wealth of information previously scattered in research journals conference proceedings and technical reports Identifies more than 200 unsolved problems Every problem is stated in a self contained extremely accessible format followed by comments on its history related results and literature The book will stimulate research and help avoid efforts on solving already settled problems Each chapter concludes with a comprehensive list of references which will lead readers to original sources important contributions and other surveys

Algebraic Frames for the Perception-Action Cycle Gerald Sommer, Yehoshua Y. Zeevi, 2006-12-30 This volume presents the proceedings of the 2nd International Workshop on algebraic Frames for the Perception and Action Cycle AFPAC 2000 held in Kiel Germany 10-11 September 2000 The presented topics cover new results in the conceptualization design and implementation of visual sensor based robotics and autonomous systems Special emphasis is placed on the role of algebraic modelling in the relevant disciplines such as robotics computer vision theory of multidimensional signals and neural computation The aims of the workshop are twofold first discussion of the impact of algebraic embedding of the task at hand on the emergence of new qualities of modelling and second facing the strong relations between dominant geometric problems and algebraic modelling The first workshop in this series AFPAC 97 inspired several groups to initiate new research programs or to intensify ongoing research work in this field and the range of relevant topics was consequently broadened The approach adopted by this workshop does not necessarily fit the mainstream of worldwide research granting policy However its search for fundamental problems in our field may very well lead to new results in the relevant disciplines and contribute to their integration in studies of the perception action cycle
