We start by explaining cryptocurrencies and then delve into the broader technology of blockchain. This book offers the latest insights on blockchain adoption and its real-world applications in corporate, scientific, healthcare, and biomedical fields. We guide readers through their first cryptocurrency transactions covering various platforms and software, including PC and Android apps. As cryptocurrency rapidly spreads globally, understanding this evolving technology is crucial. The book also explores the Greater Fools Theory in cryptocurrency, highlighting potential pitfalls to avoid. Beyond cryptocurrencies, we examine different blockchain types and their uses, including cybersecurity measures to protect blockchain systems. The book concludes with practical blockchain solutions supported by detailed illustrations, graphs, and links to further resources. Each chapter ends with key questions to reinforce learning. This book is a valuable resource for anyone looking to understand and navigate the blockchain revolution.

The De Gruyter Handbook of Automated Futures Vaike Fors, Martin Berg, Meike Brodersen, 2024-09-23 How does automation affect us, our environment, and our imaginations? What actions should we take in response to automation? Beyond grand narratives and technology-driven visions of the future, what more can automation offer? With these questions in mind, *The De Gruyter Handbook of Automated Futures* provides a framework for thinking about and implementing automation differently. It consolidates automated futures as an inter- and transdisciplinary research field, embedding the imaginaries, interactions, and impacts of automation technology within their social, historical, societal, cultural, and political contexts. Promoting a critical yet constructive and engaging agenda, the handbook invites readers to collaborate with rather than resist automation agendas. It does so by pushing the agenda for social science, humanities, and design beyond merely assessing and evaluating existing technologies. Instead, the handbook demonstrates how the humanities and social sciences are essential to the design and governance of sustainable sociotechnical systems. Methodologically, the handbook is underpinned by a pedagogical approach to staging co-learning and co-creation of automated futures with rather than simply for people. In this way, the handbook encourages readers to explore new and alternative modes of research, fostering a deeper engagement with the evolving landscape of automation.
