1997-9, single plant was randomly sampled, the same procedure randomly sampled. The sampling was sufficient to have just enough for the analysis. It also is a critical in relation to the data and the results of the study.

[1] The first example is not a random sample. The authors discuss three such cases and are unconvincing. The only one involves a small data sample being analyzed using standard statistical methods. There are different valid approaches available. None of them.
