Analysis Of Algorithm And Design By A Puntambekar:

Analysis and Design of Algorithms Anuradha A. Puntambekar, 2020-12-01 This well organized textbook provides the design techniques of algorithms in a simple and straight forward manner The book begins with a description of the fundamental concepts such as algorithm functions and relations vectors and matrices Then it focuses on efficiency analysis of algorithms In this unit the technique of computing time complexity of the algorithm is discussed along with illustrative examples Gradually the text discusses various algorithmic strategies such as divide and conquer dynamic programming Greedy algorithm backtracking and branch and bound Finally the string matching algorithms and introduction to NP completeness is discussed Each algorithmic strategy is explained in stepwise manner followed by examples and pseudo code Thus this book helps the reader to learn the analysis and design of algorithms in the most lucid way Modeling, Analysis, and Applications in Metaheuristic Computing: Advancements and Trends Yin, Peng-Yeng, 2012-03-31 This book is a collection of the latest developments models and applications within the transdisciplinary fields related to metaheuristic computing providing readers with insight into a wide range of topics such as genetic algorithms differential evolution and ant colony optimization Provided by publisher **An Elementary Approach To Design And Analysis Of Algorithms** Lekh Rej Vermani, Shalini Vermani, 2019-05-29 The book under review is an interesting elaboration that fills the gaps in libraries for concisely written and student friendly books about essentials in computer science I recommend this book for anyone who would like to study algorithms learn a lot about computer science or simply would like to deepen their knowledge The book is written in very simple English and can be understood even by those with limited knowledge of the English language It should be emphasized that despite the fact that the book consists of many examples mathematical formulas and theorems it is very hard to find any mistakes errors or typos zbMATH In computer science an algorithm is an unambiguous specification of how to solve a class of problems Algorithms can perform calculation data processing and automated reasoning tasks As an effective method an algorithm can be expressed within a finite amount of space and time and in a well defined formal language for calculating a function Starting from an initial state and initial input perhaps empty the instructions describe a computation that when executed proceeds through a finite number of well defined successive states eventually producing output and terminating at a final ending state The transition from one state to the next is not necessarily deterministic some algorithms known as randomized algorithms incorporate random input This book introduces a set of concepts in solving problems computationally such as Growth of Functions Backtracking Divide and Conquer Greedy Algorithms Dynamic Programming Elementary Graph Algorithms Minimal Spanning Tree Single Source Shortest Paths All Pairs Shortest Paths Flow Networks Polynomial Multiplication to ways of solving NP Complete Problems supported with comprehensive and detailed problems and solutions making it an ideal resource to those studying computer science computer engineering and information technology Computer Engineering: Concepts, Methodologies, Tools and Applications Management
