

Meiosis

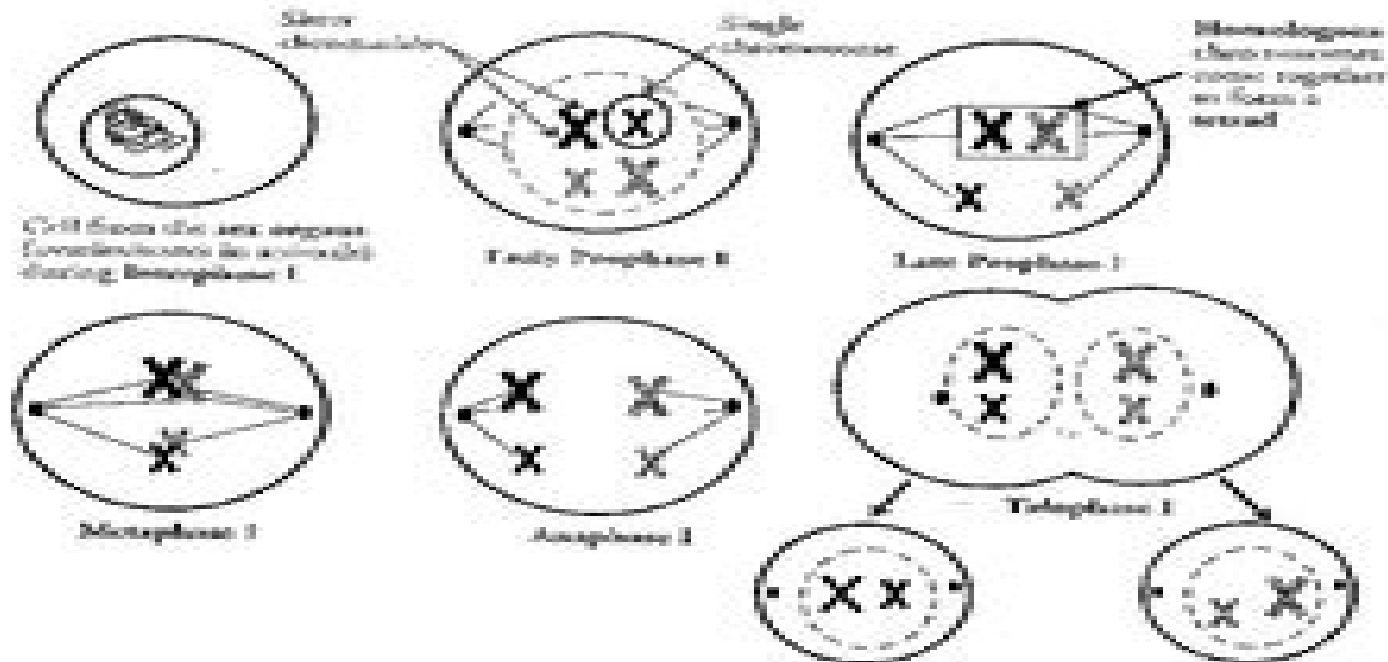

How does sexual reproduction lead to genetic variation?

KEY

Why?

Cells reproduce through mitosis to make exact copies of the original cell. This is done for growth and repair. Sexually-reproducing organisms have a special form of cell division that produces reproductive cells with half the number of chromosomes. This process is called *meiosis*, and without it, humans, oak trees, bacteria, and all other sexually-reproducing organisms would be very different than they are today.

Model 1 – Meiosis I

1. According to Model 1, in what type of organism are the cells that enter meiosis I found?
Sex organs (ovaries and testes).
2. Considering what you already know about animals in cells, what events must take place during Anaphase I before a cell proceeds to division?
DNA replication.

Answer To Mitosis Packet

L Reisser

Answer To Mitosis Packet:

Thank you definitely much for downloading **Answer To Mitosis Packet**. Maybe you have knowledge that, people have seen numerous times for their favorite books in imitation of this Answer To Mitosis Packet, but end in the works in harmful downloads.
