Anatech Hummer Manual:

Biobanking and Regenerative Medicine David T. Harris,2020-11-19 Regenerative medicine and tissue engineering play significant roles in the treatment of currently intractable conditions such as chronic heart failure stroke chronic osteoarthritis and other maladies Regenerative medicine and tissue engineering generally depend on the utilization of stem cells to treat patients but may also utilize mature cells that would not normally be considered as stem cells e g skin Stem cells like mature cells may be obtained from many sources in the body including bone marrow cord blood cord tissue adipose tissue etc Although stem cells are often used in therapy immediately upon isolation in many circumstances the stem and progenitor cells will be harvested processed and banked frozen until a later time Biobanking is a convenient alternative to same day therapeutic use in that it allows for patient recovery e g from liposuction provides time to identify the best treatment options and may allow for multiple interventions with additional patient inconvenience or risk
