1. The sizes, in square feet, of the 20 rooms in a student residence hall at a certain university are summarized in the following histogram.

- (a) Based on the histogram, write a few sentences describing the distribution of room size in the residence hall.
 (b) Summary statistics for the sizes are given in the following table.

Mean	Standard Deviation	Min	Q1	Median	Q3	Max
231.4	68.12	134	174	253.5	292	315

① The spread is about $(350 - 100) = 250 \text{ ft}^2$.
 The distribution is roughly bimodal and approximately symmetric. The median is around 250. The min is around 100 and the max is around 350.

② $IQR = 292 - 134 = 118$
 No outliers

Upper bound = $Q_3 + 1.5 \times IQR = 292 + 1.5 \times 118 = 467$
 Lower bound = $Q_1 - 1.5 \times IQR = 174 - 1.5 \times 118 = -3$

Understanding Earth's Deep Past National Research Council, Division on Earth and Life Studies, Board on Earth Sciences and Resources, Committee on the Importance of Deep-Time Geologic Records for Understanding Climate Change Impacts, 2011-08-02 There is little dispute within the scientific community that humans are changing Earth's climate on a decadal to century time scale. By the end of this century, without a reduction in emissions, atmospheric CO₂ is projected to increase to levels that Earth has not experienced for more than 30 million years. As greenhouse gas emissions propel Earth toward a warmer climate state, an improved understanding of climate dynamics in warm environments is needed to inform public policy decisions. In *Understanding Earth's Deep Past*, the National Research Council reports that rocks and sediments that are millions of years old hold clues to how the Earth's future climate would respond in an environment with high levels of atmospheric greenhouse gases. *Understanding Earth's Deep Past* provides an assessment of both the demonstrated and underdeveloped potential of the deep time geologic record to inform us about the dynamics of the global climate system. The report describes past climate changes and discusses potential impacts of high levels of atmospheric greenhouse gases on regional climates, water resources, marine and terrestrial ecosystems, and the cycling of life-sustaining elements. While revealing gaps in scientific knowledge of past climate states, the report highlights a range of high-priority research issues with potential for major advances in the scientific understanding of climate processes. This proposed integrated deep time climate research program would study how climate responded over Earth's different climate states, examine how climate responds to increased atmospheric carbon dioxide and other greenhouse gases, and clarify the processes that lead to anomalously warm polar and tropical regions and the impact on marine and terrestrial life. In addition to outlining a research agenda, *Understanding Earth's Deep Past* proposes an implementation strategy that will be an invaluable resource to decision makers in the field as well as the research community, advocacy organizations, government agencies, and college professors and students.

Landscapes and Landforms of Scotland Colin K. Ballantyne, John E. Gordon, 2021-08-24 This book provides an appealing and informative overview of the outstanding landforms and landscapes of Scotland. Scotland is internationally renowned for the diversity of its geology, landforms, and landscapes. The rock record spans most of geological time, from the Archaean to the Palaeogene, and represents the outcome of tectonic plate movements, associated geological processes, and sea level and climate changes. Scotland incorporates primeval gneiss landscapes, the deeply eroded roots of the Caledonian mountain chain, landscapes of extensional tectonics and rifting, and eroded remnants of volcanic complexes that were active when the North Atlantic Ocean

opened during the Palaeogene The present relief reflects uplift and deep weathering during the Cenozoic strongly modified during successive episodes of Pleistocene glaciation This striking geodiversity is captured in this book through 29 chapters devoted to the evolution of Scotland's scenery and locations of outstanding geomorphological significance including ancient palaeosurfaces landscapes of glacial erosion and deposition evidence of postglacial landscape modification by landslides rivers and wind and coastal geomorphology Dedicated chapters focus on Ice Age Scotland and the associated landscapes which range from alpine type mountains and areas of selective glacial erosion to ice moulded and drift covered lowlands and incorporate accounts of internationally renowned sites such as the Parallel Roads of Glen Roy the Cairngorm Mountains and the inselbergs of Assynt Other chapters consider the record of postglacial rock slope failures such as the famous landslides of Trotternish on Skye and the record of fluvial changes since deglaciation The sea level history of Scotland is addressed in terms of its raised and submerged shorelines while several chapters discuss the contrasting coastal landscapes which range from the spectacular sea cliffs of Shetland and Orkney to the beaches and dunes of eastern Scotland The role of geoconservation in preserving Scotland's outstanding geomorphological heritage is outlined in the final chapter The book offers an up to date and richly illustrated reference guide for geomorphologists other Earth scientists geographers conservationists and all those interested in geology physical geography geomorphology geotourism geoheritage and environmental protection

Climate, Culture, Change Timothy B. Leduc, 2010 Every passing day brings new headlines about climate change as politicians debate how to respond scientists offer new revelations and sceptics critique the validity of the research In *Climate Culture Change* these many political economic and scientific uncertainties that today inundate our collective consciousness are analyzed in a way that reveals the cultural scope of the challenge

The Natural Fix? Kate Trumper, United Nations Environment Programme, 2009 The report describes the vital contribution that ecosystems can and must make in our efforts to cut very large emissions of greenhouse gases that are needed if we are to avoid the worst effects of global climate change Vigorous efforts are needed to decrease carbon dioxide concentration in the atmosphere and doing so will be impossible without addressing carbon losses from ecosystems such as forests and peatlands Managing ecosystems for carbon can not only reduce carbon emissions it can also actively remove carbon dioxide from the atmosphere Restoring some of the large amounts of carbon lost from agricultural soils and drylands has the greatest potential here Publisher's description

Executive Thinking Kevin Baize OD, Morris Graham PhD, 2011-02-18 Life is about how much we think Thinking is about how much mental capacity we possess Capacity in addition to our abilities and conscientiousness is about how much we can process combinations of verbal height quantitative width and spatial depth with decisiveness direction and speed No matter where we go or what we do as executives we take our thinking with us That may spoil everything because to a great extent we do and accomplish what we think about Our thoughts mold our aspirations attitudes and accomplishments during our life In other words our careers and lives are influenced more by the power of our thoughts than anything else The

bad news is that most of us never fully use our mental capacities and never achieve our potential The good news is that neural technologies are now available to transform our thinking into the higher realms of brilliance Developing the spatial capacity to think higher wider and deeper means breaking away from the effects of years of flat thinking or educational backgrounds that stifles creative innovative potential Expand your mental agility through a development of higher order processes and discover a whole new world mentally in Executive Thinking
