**A Risk-Characterization Framework for Decision-Making at the Food and Drug Administration** Institute of Medicine,National Research Council,Division on Earth and Life Studies,Board on Environmental Studies and Toxicology,Committee on Ranking FDA Product Categories Based on Health Consequences, Phase II,2011-06-26

With the responsibility to ensure the safety of food drugs and other products the U S Food and Drug Administration FDA faces decisions that may have public health consequences every day Often the decisions must be made quickly and on the basis of incomplete information FDA recognized that collecting and evaluating information on the risks posed by the regulated products in a systematic manner would aid in its decision making process Consequently FDA and the Department of Health and Human Services DHHS asked the National Research Council NRC to develop a conceptual model that could evaluate products or product categories that FDA regulates and provide information on the potential health consequences associated with them A Risk Characterization Framework for Decision Making at the Food and Drug Administration describes the proposed risk characterization framework that can be used to evaluate compare and communicate the public health consequences of decisions concerning a wide variety of products The framework presented in this report is intended to complement other risk based approaches that are in use and under development at FDA not replace them It provides a common language for describing potential public health consequences of decisions is designed to have wide applicability among all FDA centers and draws extensively on the well vetted risk literature to define the relevant health dimensions for decision making at the FDA The report illustrates the use of that framework with several case studies and provides conclusions and recommendations

[The Cassini-Huygens Visit to Saturn](#)

Michael Meltzer, 2015-01-02 Cassini Huygens was the most ambitious and successful space journey ever launched to the outer Solar System. This book examines all aspects of the journey: its conception and planning, the lengthy political processes needed to make it a reality, the engineering and development required to build the spacecraft, its 2.2 billion mile journey from Earth to the Ringed Planet, and the amazing discoveries from the mission. The author traces how the visions of a few brilliant scientists matured, gained popularity, and eventually became a reality. Innovative technical leaps were necessary to assemble such a multifaceted spacecraft and reliably operate it while it orbited a planet so far from our own. The Cassini Huygens spacecraft design evolved from other deep space efforts, most notably the Galileo mission to Jupiter, enabling the voluminous paradigm-shifting scientific data collected by the spacecraft. Some of these discoveries are absolute gems: A small satellite that scientists once thought of as a dead piece of rock turned out to contain a warm underground sea that could conceivably harbor life. And we now know that hiding under the mist of Saturn's largest moon, Titan, is a world with lakes, fluvial channels, and dunes hauntingly reminiscent of those on our own planet, except that on Titan it's not water that fills those lakes but hydrocarbons. These and other breakthroughs illustrate why the Cassini Huygens mission will be remembered as one of the greatest voyages of discovery ever made. Mammalian Toxicology Mohamed Abou-Donia, 2015-05-04

Mammalian Toxicology surveys chemical agents and examines how such chemicals impact on human health, emphasizing the importance in minimizing environmental exposure to chemical and physical hazards in our homes, communities, and workplaces through such media as contaminated water, soil, and air. Starting with the basic principles on a wide range of toxic agents, this textbook describes how they enter the body, their mechanisms of action once inside, and strategies for diagnosis, prevention, and treatment. Topics covered include: General principles of toxicology; pharmacological and toxicological principles underpinning the study of toxicology; risk assessments and mechanisms of cell death; Disposition routes of chemical exposures: entry into the body and various tissues; storage; metabolic biotransformation and elimination, with examples from various toxicants; Toxic agents: the occurrences, disposition in the body, health effects, toxic mechanisms, antidotes, and treatments of a range of agents including pesticides, metals, solvents, gases, nanomaterials, food components, and additives; pharmaceuticals; drugs of abuse; natural toxins; endocrine disruptors; radiation and warfare weapons; Toxic effects including neurotoxicity, developmental toxicity, immunotoxicity, teratogenicity, male and female reproductive toxicity, mutagenicity, carcinogenicity, pulmonary toxicity, cardiovascular toxicity, hepatotoxicity, gastrointestinal toxicity, and cardiovascular toxicity; Toxicology and society; epidemiological studies of chemical-induced diseases in human populations; and a vision for toxicology in the 21st century. Mammalian Toxicology is an essential primer for students of toxicology, biochemistry, biology, medicine, and chemistry. It is also appropriate for professional toxicologists in research or regulatory affairs and anyone who needs to understand the adverse effects of toxic agents on the human body.
