Cardiac Electrophysiology Without Fluoroscopy Riccardo Proietti, Yan Wang, Yan Yao, Guo Qiang Zhong, Shu Lin Wu, Félix Ayala-Paredes, 2019-07-10. This book reflects how the concern regarding the effects of radiation exposure in patients and health personnel involved in cardiac electrophysiology (EP) has inspired new developments in cardiac electrophysiology procedures without the use of fluoroscopy. This innovative method has become a subspecialty within electrophysiology with several EP laboratories around the world adopting an exclusive non-fluoroscopy approach. It features guidance on how to use three-dimensional (3D) navigation systems, ablation energy sources and zero-fluoroscopic implantation of cardiac electronic devices. The potential complications and associated preventative methods with utilising RFCA are also described. Cardiac Electrophysiology Without Fluoroscopy offers a thorough description of the technique correlated to the performance of EP procedure without the use of radiation and provides a valuable resource for those seeking a practically applicable guide on how to perform cardiac EP without fluoroscopy, including practising and trainee electrophysiologists.

Environmental Geoinformatics Joseph Awange, John Kiema, 2018-12-08 This second edition includes updated chapters from the first edition as well as five additional new chapters Light detection and ranging LiDAR CORONA historical declassified products Unmanned Aircraft Vehicles UAVs GNSS reflectometry and GNSS applications to climate variability shifting the main focus from monitoring and management to extreme hydro climatic and food security challenges and exploiting big data Since the publication of first edition much has changed in terms of technology and the demand for geospatial data has increased with the advent of the big data era For instance the use of laser scanning has advanced so much that it is unavoidable in most environmental monitoring tasks whereas unmanned aircraft vehicles UAVs drones are emerging as efficient tools that address food security issues as well as many other contemporary challenges Furthermore global navigation satellite systems GNSS are now responding to challenges posed by climate change by unravelling the impacts of teleconnection e g ENSO as well as advancing the use of reflected signals GNSS reflectometry to monitor e g soil

moisture variations Indeed all these rely on the explosive use of big data in many fields of human endeavour Moreover with the ever increasing global population intense pressure is being exerted on the Earth's resources leading to significant changes in its land cover e.g. deforestation diminishing biodiversity and natural habitats dwindling fresh water supplies and changing weather and climatic patterns e.g. global warming changing sea level Environmental monitoring techniques that provide information on these are under scrutiny from an increasingly environmentally conscious society that demands the efficient delivery of such information at a minimal cost Environmental changes vary both spatially and temporally thereby putting pressure on traditional methods of data acquisition some of which are highly labour intensive such as animal tracking for conservation purposes With these challenges conventional monitoring techniques particularly those that record spatial changes call for more sophisticated approaches that deliver the necessary information at an affordable cost One direction being pursued in the development of such techniques involves environmental geoinformatics which can act as a stand alone method or complement traditional methods

Environmental Geoinformatics

Joseph L. Awange, John B. Kyalo Kiema, 2013-06-13

There is no doubt that today, perhaps more than ever before, humanity faces a myriad of complex and demanding challenges. These include natural resource depletion and environmental degradation, food and water insecurity, energy shortages, diminishing biodiversity, increasing losses from natural disasters, and climate change with its associated potentially devastating consequences, such as rising sea levels. These human-induced and natural impacts on the environment need to be well understood in order to develop informed policies, decisions, and remedial measures to mitigate current and future negative impacts. To achieve this, continuous monitoring and management of the environment to acquire data that can be soundly and rigorously analyzed to provide information about its current state and changing patterns, and thereby allow predictions of possible future impacts, are essential. Developing pragmatic and sustainable solutions to address these and many other similar challenges requires the use of geodata and the application of geoinformatics. This book presents the concepts and applications of geoinformatics, a multidisciplinary field that has at its core different technologies that support the acquisition, analysis, and visualization of geodata for environmental monitoring and management. We depart from the 4D to the 5D data paradigm, which defines geodata accurately, consistently, rapidly, and completely in order to be useful without any restrictions in space, time, or scale to represent a truly global dimension of the digital Earth. The book also features the state-of-the-art discussion of Web GIS. The concepts and applications of geoinformatics presented in this book will be of benefit to decision makers across a wide range of fields, including those at environmental agencies, in the emergency services, public health and epidemiology, crime mapping, environmental management agencies, tourist industry, market analysis, and e-commerce, or mineral exploration, among many

others The title and subtitle of this textbook convey a distinct message Monitoring the passive part in the subtitle refers to observation and data acquisition whereas management the active component stands for operation and performance The topic is our environment which is intimately related to geoinformatics The overall message is all the mentioned elements do interact and must not be separated Hans Peter Bahr Prof Dr Ing Dr h c Karlsruhe Institute of Technology KIT Germany
