High-Rise Buildings under Multi-Hazard Environment Mingfeng Huang, 2016-08-15 This book discusses performance based seismic and wind resistant design for high rise building structures with a particular focus on establishing an integrated approach for performance based wind engineering which is currently less advanced than seismic engineering. This book also provides a state of the art review of numerous methodologies including computational fluid dynamics CFD extreme value analysis structural optimization vibration control pushover analysis response spectrum analysis modal parameter identification for the assessment of the wind resistant and seismic performance of tall buildings in the design stage and actual tall buildings in use. Several new structural optimization methods including the augmented optimality criteria method have been developed and employed in the context of performance based design. This book is a valuable resource for students, researchers and engineers in the field of civil and structural engineering.

Current Perspectives and New Directions in Mechanics, Modelling and Design of Structural Systems Alphose Zingoni, 2022-09-05 Current Perspectives and New Directions in Mechanics: Modelling and Design of Structural Systems comprises 330 papers that were presented at the Eighth International Conference on Structural Engineering Mechanics and Computation SEMC 2022 Cape Town South Africa 5-7 September 2022. The topics featured may be clustered into six broad categories that span the themes of mechanics, modelling and engineering design: i) mechanics of materials: elasticity, plasticity, porous media, fracture, fatigue, damage, delamination, viscosity, creep, shrinkage, etc; ii) mechanics of structures: dynamics, vibration, seismic response, soil structure interaction, fluid structure interaction, response to blast and impact, response to fire, structural stability, buckling, collapse, behaviour; iii) numerical modelling and experimental testing: numerical methods, simulation techniques, multi-scale modelling, computational modelling, laboratory testing, field testing, experimental measurements; iv) design in traditional engineering materials: steel, concrete, steel-concrete composite, aluminium, masonry, timber; v) innovative concepts: sustainable engineering and special structures, nanostructures, adaptive structures, smart structures, composite structures, glass structures, bio-inspired structures, shells, membranes, space structures, lightweight structures, etc; vi) the engineering process and life cycle considerations: conceptualisation, planning, analysis, design, optimization, construction, assembly, manufacture, maintenance, monitoring, assessment, repair, strengthening, retrofitting, decommissioning. Two versions of the papers are available: full papers of length 6 pages are included in an e-book while short papers of length 2 pages intended to be concise but self-contained summaries of the full papers are in this printed book. This work will be of interest to civil, structural, mechanical, marine and aerospace engineers as well as planners and architects.
