management relied heavily on engineering measures or the use of gray infrastructure. Recently, there has been a call to integrate nature-based solutions (NBS) which make use of natural processes and ecosystem services with conventional engineering approaches. NBS infrastructures and designs pay great attention to ecosystem services considerations in assessing their induced hydrological processes as well as in managing the stormwater and mitigating urban flood and droughts. Nevertheless, compared with grey infrastructure, larger space could be demanded for NBS while the buffer effect for NBS in extreme events is still uncertain for evaluation.
