

ANATOMY & PHYSIOLOGY

Now in **FULL COLOR**
with **3D Model QR codes**

Anatomy and Physiology explores the essentials of human structure and function through engaging, generously illustrated, full color activities. Each body system is explored in detail. Homeostasis provides a unifying theme connecting the body systems and highlighting their interrelatedness. Students are encouraged to explore each body system within the contexts of four themes: disease, medicine and technology, aging, and exercise. The result is a rounded exploration of human anatomy and physiology.

BIOZONE's unique, interactive worktext approach encourages direct interaction with the content, allowing students to record their answers within the context of the stimulus material and form a record of work for quick and easy revision.

Activity number

Activities are numbered to make navigation through the book easier.

QR Codes

Scan the QR code to directly interact with 3D models.

Activity coding system

Tab codes indicate online support via BIOZONE's **Resource Hub** and identify any of the **four themes** covered in the activity: Aging, Exercise, Disease, and Medicine & Technology.

108 Structure of the Mammalian Heart

Key ideas: Mammals have a four-chambered heart, divided into left and right halves, and acting as a double pump. The heart is the centre of the human circulatory system. It is a hollow, muscular organ made up of four chambers (two atria and two ventricles) that alternately fill and empty of blood, acting as a double pump. The left side pumps the oxygenated blood to the rest of the body, and the right side pumps deoxygenated blood to the lungs.

Human heart structure (anterior view)

Arrows indicate oxygenated blood in the heart and body. Blood enters the heart from the right atrium. Deoxygenated blood enters the right atrium. Deoxygenated blood enters the right ventricle. Oxygenated blood enters the left atrium. Oxygenated blood enters the left ventricle. Deoxygenated blood enters the right ventricle. Oxygenated blood enters the left ventricle. Deoxygenated blood enters the right ventricle. Oxygenated blood enters the left ventricle.

The heart is not a spherical organ. Although the quantity of blood pumped by each side is the same, the walls of the left ventricle are thicker and more muscular than those of the right ventricle to enable it to pump blood to the rest of the body.

Key idea: Each activity has a key idea summarizing its primary focus. It helps students to understand where the activity's emphasis lies.

Comprehensive, engaging diagrams: Engaging, high quality diagrams provide a visual focus whilst delivering important information in an accessible format.

Content organization: Logically organized content makes it easier for students to access and engage with the information.

Direct questioning: A direct questioning style helps students easily identify what is being asked.

Write-on answers: Students input their answers directly onto the page. This becomes their **record of work** and helps them when it is time to review for tests and exams.

1. In the schematic diagram of the heart below, label the four chambers and the main vessels entering and leaving them. Then complete the diagram of blood flow. Use the large coloured circles to mark the direction of flow of the blood.
