Johnstone Triangle Norman Reid,2021-01-18 Chemistry is often seen as a difficult subject to understand This book focusses on the triangle model that Alex H Johnstone developed in the early 1980s Originally conceived in the context of making chemistry more accessible to a wider range of learners the model has been applied in almost every area of education in chemistry at all stages of learning In looking at why chemistry is difficult there are two central questions Firstly does the problem relate to the nature of chemistry and secondly does it relate to the way humans gain understanding Both were found to be important and the answers to the two question were found to be connected The triangle model arose from sustained research into human learning The central finding from research is the critical role of working memory and the model rationalises so much evidence from chemistry education research as well as the repeated experiences of teachers of chemistry at all levels In order to understand chemistry it is essential to develop sound mental models of molecular reality It generates major implications for the way a chemistry curriculum should be constructed and the processes of teaching and learning in chemistry when the goal is focussed on understanding the key ideas Some of these implications are developed and pointers offered to more successful ways forward The power of the Johnstone Triangle lies in the way it offers clear directions for all involved in chemistry education It is hoped that this book will prove helpful to all involved in sharing the exciting story of the way humans have come to understand the molecular world one of the great examples of great human

Acting for Reasons Emma Borg,2024-11-11 Acting for Reasons is about why we do what we do It s also about how we arrive at an understanding of other people s actions A traditional view in philosophy Common sense Psychology holds that mental states like beliefs and desires states which provide a person s reasons for doing what they do lie at the heart of intentional action and social cognition According to this view typically what people do is a rational response to the reasons they have I open the cookie jar because I d like a cookie and believe there is one in there As a corollary understanding someone else s actions is held to depend on attributing them plausible mental states and reasoning I think you opened the cookie jar because you wanted a cookie and believed there was one in there This reasons responsive understanding of action lies at the heart of crucial social notions like agency and responsibility However it has been thrown into doubt by experimental findings which apparently show that the common sense appeal to reasons and reasoning is overly demanding and overly intellectualising painting an idealised picture of decision making which is rarely borne out by the evidence If we get out of our armchairs and examine how people actually make decisions the claim is what we find is that people don t do what they do typically based on the reasons they have Instead people are swayed by biases and flaws in their reasoning systems using cognitive heuristics intuitive gut feel decision making processes which bypass the proper consultation of reasons Furthermore if we look at how animals infants and adults under time or other pressures understand the actions of others what we find is that they appeal to simpler systems e g looking only at environmental factors and overt behaviour providing a route to action understanding that circumvents attribution of reasons and reasoning In short then experimental findings show that common sense psychology is wrong This book is an attempt to reject that line of argument and defend the common sense perspective vindicating the core philosophical idea that in the typical case people do what they do for the reasons they have
