shared vocabulary of the field of science teaching and learning Science education is a part of education studies but has developed a unique vocabulary that is occasionally at odds with the ways some terms are commonly used both in the field of education and in general conversation Therefore understanding the specific way that terms are used within science education is vital for those who wish to understand the existing literature or make contributions to it The Language of Science Education provides definitions for 100 unique terms but when considering the related terms that are also defined as they relate to the targeted words almost 150 words are represented in the book For instance laboratory instruction is accompanied by definitions for openness wet lab dry lab virtual lab and cookbook lab Each key term is defined both with a short entry designed to provide immediate access following by a more extensive discussion with extensive references and examples where appropriate Experienced readers will recognize the majority of terms included but the developing discipline of science education demands the consideration of new words For example the term blended science is offered as a better descriptor for interdisciplinary science and make a distinction between project based and problem based instruction Even a definition for science education is included The Language of Science Education is designed as a reference book but many readers may find it useful and enlightening to read it as if it were a series of very short stories *Methodological and Technological Advances in Death Investigations* Ann H Ross, Jason H Byrd, 2023-12-08 Methodological and Technological Advances in Death Investigations Application and Case Studies focuses on advancements in both methods and technology in death investigations Specifically in the areas of latent fingerprints facial recognition wildlife forensics using aerial vehicles and 3D ID The combination of national and international authors and a discussion of the state of forensic science over a decade after the National Academies 2009 Report Strengthening Forensic Science in the United States A Path Forward further highlights the boundaries limitations and context in which these newer technologies and applications act synergistically to enhance forensic science Synthesizes new and emerging technologies to put them in perspective for researchers and practitioners such as facial recognition using aerial vehicles and 3D ID Includes case studies throughout that explain how certain advanced technologies impact investigations Fills a gap in literature with more cross disciplinary topics that pertain to death investigations **Biology** ,1987
