Right and Left Lungs

Our respiratory system is the main part which air enters the body. The right (anterior) side, the left (posterior) side.

The main cavity is made up of two parts - the right and left lung cavities.

Right lung - the right lung is larger and contains the right main bronchus.

Left lung - the left lung is smaller and contains the left main bronchus.

Diaphragm - the diaphragm is a muscular partition between the chest and abdominal cavities.

Trachea - the trachea is the windpipe, which carries air into the lungs.

Bronchi - the bronchi are the main airways that branch out from the trachea into the lungs.

Alveoli - the alveoli are the tiny air sacs where gas exchange takes place.

Capillaries - the capillaries are the tiny blood vessels that surround the alveoli.

Respiratory muscles - the respiratory muscles are the muscles that contract and relax to move air in and out of the lungs.

Diaphragm - the diaphragm is a muscular partition between the chest and abdominal cavities.

The mechanism of respiration involves the contraction and relaxation of the respiratory muscles, which moves air in and out of the lungs. This is dependent on the pressure changes in the atmosphere and the thoracic cavity.

Inhalation: The process of breathing in, where the diaphragm contracts and moves down, and the rib cage expands outwards. This increases the volume of the thoracic cavity, creating a negative pressure that draws air into the lungs.

Exhalation: The process of breathing out, where the diaphragm relaxes and moves up, and the rib cage contracts. This decreases the volume of the thoracic cavity, creating a positive pressure that pushes air out of the lungs.

Respiration: The overall process of gas exchange, where oxygen is taken in and carbon dioxide is removed from the body.

Respiratory system: The organs and structures involved in the process of respiration, including the trachea, bronchi, and lungs.

Respiratory muscles: The muscles that contract and relax to move air in and out of the lungs, including the diaphragm and intercostal muscles.

Diaphragm: A muscular partition between the chest and abdominal cavities that contracts and relaxes to move air in and out of the lungs.
