

FORCES AND NEWTON'S LAWS

Reinforcement**Newton's Laws of Motion**

Directions: Use the equation $F = ma$ to solve the following problems. Show your calculations in the spaces provided.

1. How much force is needed to accelerate a 1000-kg car at a rate of 3 m/s^2 ?

2. If a 70-kg swimmer pushed off a pool wall with a force of 250 N, at what rate will the swimmer accelerate from the wall?

3. A weightlifter raises a 200-kg barbell with an acceleration of 3 m/s^2 . How much force does the weightlifter use to raise the barbell?

4. A dancer lifts his partner above his head with an acceleration of 2.5 m/s^2 . The dancer exerts a force of 200 N. What is the mass of the partner?

Directions: Answer the following questions on the lines provided.

5. What does Newton's second law of motion state?

6. What two factors affect the rate of acceleration of an object?

7. If you push on a wall with a force of 200 N, with what force does the wall push back?

contemporary engineering The structure of the conference programme reflected the multidimensional nature of our research and was built around the priority research areas for the school 1 Sustainable Energy stands as a testament to our commitment to a greener more efficient future We aim to advance energy technology and play a key role in addressing the increasing demand for sustainable and low carbon technologies while reducing environmental impact and ensuring a sustainable environment Our work helps to drive forward net zero solutions for achieving the government carbon targets 2 Advanced Manufacturing represents cutting edge research into materials systems and transformative technologies to transform engineering and economic performance in the transport energy generation and manufacturing industries Our research in this area focuses on developing smart materials and structures and sustainable manufacturing processes that help create a sustainable and greener economy 3 Civil Infrastructure takes centre stage as we improve the sustainability and resilience of infrastructure across the UK and the globe We work on developing sustainable and resilient total lifecycle solutions across a wide range of domains including construction structures energy geo environmental and water infrastructure systems From creating new nano scale smart materials to macro scale urban interventions 4 Compound Semiconductors and Applications represents the cutting edge of electronics a critical driver of progress in the digital age We explore the latest developments in compound semiconductor materials advanced characterisation techniques quantum optics and novel circuit design methodologies and their diverse applications We anticipate breakthroughs that will power the next generation of computing communication and sensing technologies 5 Engineering for Health forms a cornerstone of our discussions recognizing the pivotal role technology plays in revolutionizing healthcare We are applying the latest research in medical engineering to push the boundaries in areas where innovation has the potential to transform patient care

Advanced Motion Control and Navigation of Robots in Extreme Environments Allahyar Montazeri, Nargess Sadeghzadeh-Nokhodberiz, Khoshnam Shojaei, Kaspar Althoefer, 2024-11-20 Advances in robotics and autonomous systems have opened new horizons for the scientists by creating new opportunities to explore extreme environments that would previously not have been possible For example robots that are deployed to study environmental processes such remote volcanos monitor the climate variables under the adverse weather conditions understand underground mines and explore deep oceans which are all inaccessible or hazardous for the human Industrial applications can also often be situated in extreme environments such as offshore oil and gas and nuclear industries In such applications the autonomous robot is expected to complete tasks such as repair and maintenance exploration reconnaissance inspection and transportation which is either done in isolation or as a team of cooperative robots Due to the harsh and severe conditions of such environments designing an advanced robotic system that can endure them is a challenging task The robot needs to cope with the time varying restricted uncertain and unstructured nature of the environment to achieve the planning and execution of the tasks This in turn demands development of advanced robust and adaptive motion control and navigation algorithms along with

machine learning and deep learning algorithms with high cognitive capability for the robot to perceive the surrounding environment effectively The use of both single and multi robot platforms can be advantageous depending on the specific application and environment
