[Note to teachers and students: This Gizmo was designed as a follow-up to the Evolution: Mutation and Selection Gizmo. We recommend doing that activity before trying this one.]

Prior Knowledge Question (Do this BEFORE using the Gizmo.)

This illustration from an old textbook shows some of the over 150 different dog **breeds** that can be seen around the world today. How do you think all of these different breeds were developed?

They used artificial selection to breed new dog species.

Gizmo Warm-up

Dog breeds and other varieties of domesticated animals were developed through **artificial selection**. Over many generations, breeders selected which animals to mate in order to select for desired traits. The *Evolution: Natural and Artificial Selection* Gizmo allows you to try your hand at breeding insects with a variety of colors. To begin, select the **Artificial selection** option.

1. Drag the 10 insects into the breeding alcoves on the left side of the Gizmo.

A. How many breeding pairs are there?

There are 5 pairs.

The Greatest Invention Silvia Ferrara, 2022-03-01 In this exhilarating celebration of human ingenuity and perseverance published all around the world a trailblazing Italian scholar sifts through our cultural and social behavior in search of the origins of our greatest invention writing The L where a tabletop meets the legs the T between double doors the D of an armchair s oval backrest all around us is an alphabet in things But how did these shapes make it onto the page never mind form complex structures such as this sentence In The Greatest Invention Silvia Ferrara takes a profound look at how and how many times human beings have managed to produce the miracle of written language traveling back and forth in time and all across the globe to Mesopotamia Crete China Egypt Central America Easter Island and beyond With Ferrara as our guide we examine the enigmas of undeciphered scripts including famous cases like the Phaistos Disk and the Voynich Manuscript we touch the knotted colored strings of the Inca quipu we study the turtle shells and ox scapulae that bear the earliest Chinese inscriptions we watch in awe as Sequoyah single handedly invents a script for the Cherokee language and we venture to the cutting edge of decipherment in which high powered laser scanners bring tears to an engineer s eye A code cracking tour around the globe The Greatest Invention chronicles a previously uncharted journey one filled with past flashes of brilliance present day scientific research and a faint fleeting glimpse of writing s future Nature Versus Natural Selection Coe, 1895

Nature Versus Natural Selection Charles Clement Coe, 1895 *Natural Selection* J. Phil Gibson, Terri R. Gibson, 2009 In his groundbreaking book Natural Selection Charles Darwin explained his theory that evolution is driven by adaptation of species to their environmental surroundings From the tiniest microbe to the largest whale all organisms have changed over vast expanses of time due to the forces of natural selection This new title in the Science Foundations series provides an overview of the processes and causes that drive natural selection and the principles that explain how it operates using numerous diverse organisms as examples Natural Selection promotes a solid understanding of how organisms change over the course of generations and how current biodiversity came to be **Adaptation and Natural Selection** George

Christopher Williams, 2018-10-30 Biological evolution is a fact but the many conflicting theories of evolution remain controversial even today When Adaptation and Natural Selection was first published in 1966 it struck a powerful blow against those who argued for the concept of group selection the idea that evolution acts to select entire species rather than individuals Williams s famous work in favor of simple Darwinism over group selection has become a classic of science literature valued for its thorough and convincing argument and its relevance to many fields outside of biology Now with a new foreword by Richard Dawkins Adaptation and Natural Selection is an essential text for understanding the nature of scientific debate **Evolution Natural Selection** Balaji Sampath, Ravishankar, Marimuthu, 2004 *The Genetical Theory*

of Natural Selection Sir Ronald Aylmer Fisher, 1958 **Understanding Natural Selection** Michael Ruse, 2022-11-17 Natural selection as introduced by Charles Darwin in the Origin of Species 1859 has always been a topic of great conceptual

and empirical interest This book puts Darwin's theory of evolution in historical context showing that in important respects his central mechanism of natural selection gives the clue to understanding the nature of organisms Natural selection has important implications not just for the understanding of life's history single celled organism to man but also for our understanding of contemporary social norms as well as the nature of religious belief The book is written in clear non technical language appealing not just to philosophers historians and biologists but also to general readers who find thinking about important issues both challenging and exciting Evolution by Natural Selection, 2006 **Natural Selection in the Wild** John A. Endler, 2020-03-31 Natural selection is an immense and important subject yet there have been few attempts to summarize its effects on natural populations and fewer still which discuss the problems of working with natural selection in the wild These are the purposes of John Endler's book In it he discusses the methods and problems involved in the demonstration and measurement of natural selection presents the critical evidence for its existence and places it in an evolutionary perspective Professor Endler finds that there are a remarkable number of direct demonstrations of selection in a wide variety of animals and plants The distribution of observed magnitudes of selection in natural populations is surprisingly broad and it overlaps extensively the range of values found in artificial selection He argues that the common assumption that selection is usually weak in natural populations is no longer tenable but that natural selection is only one component of the process of evolution natural selection can explain the change of frequencies of variants but not their origins Evolution by natural selection, 1973 The Inadequacy of "natural Selection" Herbert Spencer, 1893 Natural Selection Theory Carl Jay Bajema, 1983 **Artificial Selection and the Development of Evolutionary Theory** Carl Jay Bajema, 1982 **Artificial Selection and the Development of Evolutionary Theory** Carl Jay Bajema, 1980 Gene Game, **The Statistics of Natural Selection on Animal Populations** Bryan F.
