

7-2 Inverses of Relations and Functions

You can also find and apply inverses to relations and functions. To graph the **inverse relation**, you can reflect each point across the line $y = x$. This is equivalent to switching the x - and y -values in each ordered pair of the relation.

Remember!

A *relation* is a set of ordered pairs. A *function* is a relation in which each x -value has, at most, one y -value paired with it.

web sieve analysis has in general been used for decades to monitor material quality based on particle size for coarse material sizes that range down to 100 mesh 150µm a sieve analysis and particle size distribution is accurate and consistent however for material that is finer than 100 mesh dry sieving can be significantly less accurate
