decades that have passed since Garfinkel developed ethnomethodology several confusions have arisen as to what he meant. The author argues that these have resulted in a blunting of Garfinkel's original intentions which compromise the adequacy of ethnomethodological description. In response, this book shows how Sacks' considerations of adequacy can ground ethnomethodology as a natural observational science that redirects it towards developing further coherent and precisely circumscribed bodies of work to those of Sacks' own coherent and precisely circumscribed studies. It will appeal to both new and existing scholars of ethnomethodology and conversation analysis as well as those with interests in social theory methodology and those who have taken up the relevance of conversation analysis for their research and are interested in the ethnomethodological heritage of conversation analysis.

Models of Bounded Rationality and Mechanism Design

Jacob Glazer, Ariel Rubinstein, 2016-08-22 This book brings together the authors' joint papers from over a period of more than twenty years. The collection includes seven papers, each of which presents a novel and rigorous model in Economic Theory. All of the models are within the domain of implementation and mechanism design theories. These theories attempt to explain how incentive schemes and organizations can be designed with the goal of inducing agents to behave according to the designer's principal's objectives. Most of the literature assumes that agents are fully rational. In contrast, the authors inject into each model an element which conflicts with the standard notion of full rationality, demonstrating how such elements can dramatically change the mechanism design problem. Although all of the models presented in this volume touch on mechanism design issues, it is the formal modeling of bounded rationality that the authors are most interested in. A model of bounded rationality signifies a model that contains a procedural element of reasoning that is not consistent with full rationality. Rather than looking for a canonical model of bounded rationality, the articles introduce a variety of modeling devices that will capture procedural elements not previously considered and which alter the analysis of the model. The book is a journey into the modeling of bounded rationality. It is a collection of modeling ideas rather than a general alternative theory of implementation.
