Describing Motion

Directions: Use the words from the word bank below to complete answers #1-9.

accelerating	distance	average speed	position	direction
velocity	displacement	reference point	finish line	

1. Motion is a change in position.
2. To describe motion, you must have a reference point.
3. For a runner in a 100m dash, a good reference point would be the finish line.
4. To locate an object, you need to know its distance and direction from a reference point.
5. How far an object travels is its distance.
6. The direction and the distance between the final position and the starting position is called the displacement.
7. When you go for a bike ride, your total distance divided by the total time of your ride is the average speed of your ride.
8. A change in velocity can be due to a change in speed, direction, or both.
9. An object is accelerating if it is speeding up, slowing down, or turning.

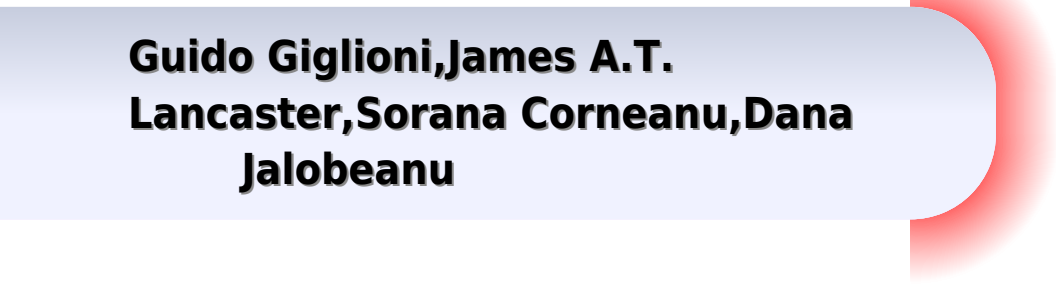

The underlined words in the sentences below make the sentences FALSE. The words to make the sentences true are in the word bank below. Write the words that would make the sentences TRUE on the lines provided.

average speed	velocity	less than	reference	is accelerating	changing
---------------	----------	-----------	-----------	-----------------	----------

- changing 10. An object moves around a circular track at 2 m/s. It has a constant velocity.
- less than 11. If you climb a winding road up a mountain, your displacement is the same as your distance.
- velocity 12. Acceleration is the rate of change of speed, divided by the amount of time over which the change occurs.
- is accelerating 13. A moving merry-go-round horse is not accelerating.
- reference 14. To describe the motion of an object, you must have a reference point.
- average speed 15. Velocity equals the total distance divided by the total time.

Answer Key For Notions About Motions:

The Elusive Notion of Motion Alan A. Kubitz, 2010-12 Ever been confused by basic physics and intimidated by the mere thought of Einstein's relativity theories? If so, yet curiosity still beckons, this book is for you. The reward: The colorful history of the elusive notion of motion and unique insights into the fundamental physics behind it all, including relativity. The physics of motion is so fundamental to science and the technological age in which we live that four of the most illustrious names in the annals of science owe their towering reputations in large part to their milestone work on the physics of motion. This book relates the stories of Johannes Kepler, Galileo Galilei, Isaac Newton, and Albert Einstein as they each stalked the elusive notion of motion. Following in their footsteps, both the layperson with no formal background in mathematics or physics and the practicing engineer/scientist will better understand those physical principles which eluded the best minds for centuries. As Aristotle observed over two thousand years ago, in order to know the natural world, one must first understand motion. Alan Kubitz lives in the heart of California's silicon valley, where he spent many years as an electrical engineer designing computer peripheral devices. Throughout his engineering career and subsequent retirement, he has been deeply interested in the history of science with an emphasis on the fifteenth through the nineteenth centuries. His particular interest is the physics of motion and the pioneering scientists/natural philosophers such as Galileo and Newton, who bequeathed to us the intellectual crown jewels which comprise the foundation of modern physics. Mr. Kubitz has accumulated a substantial reference library on these subjects and enjoys writing about them. Other interests include music, book collecting, and with his wife, their four grandchildren. He holds a Bachelor of Science degree in electrical engineering from Stanford University and a Master of Science degree in electrical engineering from the University of California, Santa Barbara.

Answer Key For Linguistics

Victoria A. Fromkin, Donca Steriade, Pamela Munro, Bruce Hayes, Susan Curtiss, Anna Szabolcsi, Tim Stowell, Edward Stabler, Dominique Sportiche, Hilda Koopman, Patricia Keating, Nina Hyams, 2001-08-22 *Linguistics: An Introduction to Linguistic Theory* is a textbook written for introductory courses in linguistic theory for undergraduate linguistics majors and first-year graduate students. Twelve major figures in the field bring their expertise to each of the core areas of the field: morphology, syntax, semantics, phonetics, phonology, and language acquisition. In each section, the book is concerned with discussing the underlying principles common to all languages, showing how these are revealed in language acquisition and in the specific grammars of the world's languages. Theoretical concepts are introduced through the analysis of a wide set of language data from Arabic to Zulu. The student will learn how to do linguistics by working through real linguistic data. Each section explains how to define and solve a problem, organizes the data into paradigms revealing the structured patterns in the data, formulates generalizations based on these patterns, proposes rules or principles to account for the generalization, seeks independent evidence in its argument for the proposed theoretical construct. The book brings the latest developments in theoretical linguistics to bear in its discussion of the traditional issues. It covers these subjects in greater depth than is found

in most introductory texts permitting the student to proceed directly after using this text to graduate courses in the field It contains problems a glossary and a bibliography for further reading Linguistics is supported by an instructor s manual
