Zumdahl, 2004 Description Not Yet Available **Tau oligomers** Jesus Avila, Naruhiko Sahara, 2014-08-18 Neurofibrillary tangles NFTs composed of intracellular aggregates of tau protein are a key neuropathological feature of Alzheimer's Disease AD and other neurodegenerative diseases collectively termed tauopathies The abundance of NFTs has been reported to correlate positively with the severity of cognitive impairment in AD However accumulating evidences derived from studies of experimental models have identified that NFTs themselves may not be neurotoxic Now many of tau researchers are seeking a toxic form of tau protein Moreover it was suggested that a toxic tau was capable to seed aggregation of native tau protein and to propagate in a prion like manner However the exact neurotoxic tau species remain unclear Because mature tangles seem to be non toxic component tau oligomers as the candidate of toxic tau have been investigated for more than one decade In this topic we will discuss our consensus of tau oligomers because the term of tau oligomers e.g. dimer disulfide bond

dependent or independent multimer more than dimer granular definition by EM or AFM and maybe small filamentous aggregates has been used by each researchers definition From a biochemical point of view tau protein has several unique characteristics such as natively unfolded conformation thermo stability acid stability and capability of post translational modifications Although tau protein research has been continued for a long time we are still missing the mechanisms of NFT formation It is unclear how the conversion is occurred from natively unfolded protein to abnormally mis folded protein It remains unknown how tau protein can be formed filaments e g paired helical filament PHF straight filament and twisted filament in cells albeit in vitro studies confirmed tau self assembly by several inducing factors Researchers are still debating whether tau oligomerization is primary event rather than tau phosphorylation in the tau pathogenesis Inhibition of either tau phosphorylation or aggregation has been investigated for the prevention of tauopathies however it will make an irrelevant result if we don t know an exact target of neurotoxicity It is a time to have a consensus of definition terminology and methodology for the identification of tau oligomers
