Geospatial Information Handbook for Water Resources and Watershed Management, Volume III John G Lyon,Lynn Lyon,2022-12-21 Volume III of Geospatial Information Handbook for Water Resources and Watershed Management discusses water and watershed issues such as water quality evapotranspiration water resource management and ecological services Featured is a two stage ditch and river geomorphology case study section with related water geospatial applications including historical image analyses of floodplains and channels and resulting change in river geomorphology through erosion and transport and influence on dependent vegetation communities Captures advanced Geospatial Technologies GT and their applications to address a wide spectrum of water issues Provides real world two stage ditch and river geomorphology case studies using river stream and channel measures and change models and bankfull discharge modeling Global in coverage with applications demonstrated by more than 170 experts in water sciences and two stage ditch and river geomorphology This handbook is a wide ranging and contemporary reference of advanced geospatial techniques used in numerous practical applications at the local and regional scale and is an in depth resource for professionals and the water research community worldwide Geomorphic Analysis of River Systems Kirstie A. Fryirs,Gary J. Brierley,2012-12-10 Filling a niche in the geomorphology teaching market this introductory book is built around a 12 week course in fluvial geomorphology Reading the landscape entails making sense of what a riverscape looks like how it works how it has evolved over time and how alterations to one part of a catchment may have secondary consequences elsewhere over different timeframes These place based field analyses are framed within their topographic climatic and environmental context Issues and principles presented in the first part of this book provide foundational understandings that underpin the approach to reading the landscape that is presented in the second half of the book In reading the landscape detective style investigations and interpretations are tied to theoretical and conceptual principles to generate catchment specific analyses of river character behaviour and evolution including responses to human disturbance This book has been constructed as an introductory text on river landscapes

providing a bridge and or companion to quantitatively framed or modelled approaches to landscape analysis that are addressed elsewhere Key principles outlined in the book emphasise the importance of complexity contingency and emergence in interpreting the character behaviour and evolution of any given system The target audience is second and third year undergraduate students in geomorphology hydrology earth science and environmental science as well as river practitioners who use geomorphic understandings to guide scientific and or management applications The primary focus of Kirstie and Gary s research and teaching entails the use of geomorphic principles as a tool with which to develop coherent scientific understandings of river systems and the application of these understandings in management practice Kirstie and Gary are co developers of the River Styles Framework and Short Course that is widely used in river management decision making and training Additional resources for this book can be found at www.wiley.com/go/fryirs_riversystems Alaska Peninsula National Wildlife Refuge U.S. Fish and Wildlife Service.
