Remanufacturing Initiation for Original Equipment Manufacturers Johan Vogt Duberg, 2024-04-29 Remanufacturing is an industrial process in which a core a used discarded or broken product is transformed into a product with a like new specification and condition However to this date remanufacturing activities on the market are few compared to manufacturing There are several types of remanufacturers the least common type is the original equipment remanufacturer an original equipment manufacturer that not only manufactures new products but also remanufactures cores of its own products Remanufacturing is potentially becoming a more widely used industrial process for original equipment manufacturers and increased remanufacturing activities can positively contribute to the environment The contribution comes from a reduction of raw material and energy consumption compared to manufacturing Therefore remanufacturing has the potential to decouple environmental impact from economic growth thus contributing to more sustainable societies However assessing the benefits of remanufacturing does not directly correlate to growth within the remanufacturing industry To encapsulate the environmental social and economic benefits of remanufacturing manufacturers need to be aware of how remanufacturing can be initiated and implemented in practice Therefore the objective of this dissertation is to develop support measures for original equipment manufacturers to initiate profitable remanufacturing This research takes a stand in case study and transdisciplinary research where the initiation of profitable remanufacturing is studied at two original equipment manufacturers The research study developed knowledge of how remanufacturing could be incorporated into existing operations at original equipment manufacturers In parallel financial assessments based on cost benefit analysis were built to measure how well the case companies could perform remanufacturing For the case study research seven remanufacturing scenarios were developed ranging from centralised remanufacturing performed by the original equipment manufacturer to decentralised performed at multiple locations using a retail network Which scenario is preferable depends on for example risk consciousness cooperation between actors and volume targets However given ideal circumstances remanufacturing in house in a centralised scenario was shown to be the most beneficial for the investigated original equipment manufacturer since the fewer middle hands and economies of scale also potentially enable lower costs For the transdisciplinary research the remanufacturing initiation was business model centric meaning that the remanufacturing system was a consequence of a decision for a specific business model Here a scenario based analysis was developed to understand under which circumstances the business model with remanufacturing was more lucrative for the provider the original equipment manufacturer and less costly for the users the customers For this a systematic assessment approach was developed

consisting of three steps 1 provide a cost overview for each business model 2 create scenarios by modifying the cost drivers and 3 combine scenarios to reach synergetic effects Based on the case study two sets of four prerequisites for initiating remanufacturing were derived These are divided into essential and supporting prerequisites and illustrated through a framework called the Remanufacturing Rocket The essential prerequisites highlight fundamental requirements to perform remanufacturing Should one of these four factors be missing remanufacturing cannot be successfully initiated The supporting prerequisites are valuable to enhance the effectiveness and efficiency of the process such as through streamlined operations organisational change or information exchange Hence to reach the fullest potential of remanufacturing both the essential and the supporting prerequisites are needed Furthermore the area of financial assessments was explored in a systematic literature review to identify insights for developing such assessments tailored for individual original equipment manufacturers in initiating remanufacturing For this six perspectives for framing financial assessments are proposed These cover the system boundaries for the assessments as well as the individual needs and visions of original equipment manufacturers Additionally a framework was developed to select financial assessment models for remanufacturing initiations based on ease of use and capability to handle complex datasets Conclusively it is proposed to apply the prerequisites for initiating remanufacturing together with a financial assessment in an iterative manner to investigate the profitability for original equipment manufacturers to initiate remanufacturing The essential prerequisites influence the first iteration of the financial assessment which then contributes to refinements of how the essential prerequisites should be aligned in an economically preferable way Once satisfactory another iterative process could be initiated between the supporting prerequisites and the financial assessment By using the proposed approach the prospects of profitable remanufacturing could be thoroughly investigated before attempting to initiate a process in practice thus reducing the number of resources spent in vain Additionally the iterative process was integrated into a 5 step Approach For Initiating Remanufacturing 5AFIR to guide original equipment manufacturers towards initiating profitable remanufacturing

Refabrikation oder Wiederaufbereitung engl Remanufacturing ist ein industrieller Prozess bei dem ein Altteil ein gebrauchtes ausrangiertes verschlissenes oder defektes Produkt gem den Herstellerspezifikationen in einen neuwertigen Zustand gebracht wird Heutzutage macht Refabrikation allerdings nur einen kleinen Teil der Fertigungsindustrie aus Verschiedene Arten von Unternehmen betreiben Refabrikation wobei Originalhersteller sogenannte OEMs engl f r Original Equipment Manufacturer am seltensten sind Solche OEMs betreiben neben Produktion auch eine Wiederaufbereitung ihrer eigenen Produkte Refabrikation kann sowohl kologische als auch konomische Vorteile bringen und hat somit grunds tzlich hohes Marktpotential Der geringere Rohstoff und Energieverbrauch von Refabrikation im Vergleich zu Neuproduktion ist ein Beispiel f r kologischen Vorteil Refabrikation erm glicht au erdem negative Umweltauswirkungen durch Produktion und Wirtschaftswachstum voneinander unabh ngig zu machen und tr gt somit zu nachhaltigem Wachstum bei Allerdings h ngt der

Nutzen von Refabrikation nicht direkt mit dem Wachstum innerhalb der Refabrikationsbranche zusammen. Um die ökonomischen, sozialen und ökonomischen Vorteile nutzen zu können, müssen Hersteller Kompetenz zur praktischen Umsetzung von Refabrikation aufbauen. Ziel dieser Dissertation ist daher die Entwicklung von Unterstützungsmassnahmen und Konzepten für OEMs, die zu profitabler Refabrikation führen. Diese Arbeit basiert auf einer Fallstudie und auf transdisziplinärer Forschung, bei der die Einführung von profitabler Refabrikation bei zwei OEMs untersucht wurde. Die Fallstudie lieferte Erkenntnisse darüber, wie Refabrikation in bestehende Abläufe bei OEMs integriert werden kann. Außerdem wurden finanzielle Bewertungskriterien auf der Grundlage einer Kosten-Nutzen-Analyse erstellt, um messen zu können, wie erfolgreich die untersuchten Unternehmen Refabrikation implementieren können. Für die Fallstudie wurden sieben Refabrikationsszenarien entwickelt, die von zentraler Refabrikation durch das OEM bis zu dezentraler Refabrikation an mehreren Standorten durch ein Netzwerk von Niederlassungen reichen. Welches der Szenarien vorzuziehen ist, hängt beispielsweise vom Risikobewusstsein der Zusammenarbeit der Akteure und den angestrebten Stückzahlen ab. Unter idealen Umständen erwies sich die unternehmensinterne Refabrikation mit zentralisierter Struktur als das vorteilhafteste Szenario. Für die untersuchten OEMs führten weniger Zwischenhändler und Grenvorteile zu geringeren Kosten. In der transdisziplinären Forschung dieser Dissertation wurde davon ausgegangen, dass das Refabrikationssystem aus der Entscheidung für ein bestimmtes Geschäftsmodell folgt. Basierend auf verschiedenen Szenarien wurde analysiert, unter welchen Umständen das Geschäftsmodell inklusive Refabrikation für den Anbieter OEM lukrativer und für die Anwender Kunden kostengünstiger war. Hierzu wurde ein systematisches Bewertungsschema entwickelt, das aus drei Schritten besteht: 1. Bereitstellung einer Kostenübersicht für jedes Geschäftsmodell, 2. Erstellung von Szenarien durch Modifikation der Kostentreiber und 3. Kombination von Szenarien, um Synergieeffekte zu erzielen. Anforderungen für die Einführung von Refabrikation wurden auf Basis der Fallstudie abgeleitet. Diese sind in vier essentielle und vier unterstützende Anforderungen eingeteilt und werden durch ein Modell namens Refabrikationsrakete veranschaulicht. Die essentiellen Anforderungen sind grundlegend für die Durchführung von Refabrikation. Ist eine dieser vier Anforderungen nicht erfüllt, kann Refabrikation nicht erfolgreich umgesetzt werden. Die unterstützenden Anforderungen steigern die Effektivität und Effizienz des Einführungsprozesses, beispielsweise durch optimierte Abläufe, organisatorische Änderungen oder Informationsaustausch. Um das volle Potenzial von Refabrikation auszuschöpfen, müssen sowohl die essentiellen als auch die unterstützenden Anforderungen erfüllt werden. Wirtschaftliche Bewertungskriterien wurden im Rahmen einer systematischen Literaturrecherche betrachtet. Ziel der Recherche war es, Erkenntnisse für die Entwicklung solcher Bewertungskriterien zu erlangen. Die Kriterien sollen dabei auf einzelne OEMs und die Einführung von Refabrikation zugeschnitten sein. In dieser Arbeit werden sechs Ansätze für die Entwicklung wirtschaftlicher Bewertungskriterien vorgeschlagen. Diese Ansätze behandeln sowohl Systemgrenzen für die Bewertungskriterien als auch individuelle Bedürfnisse und Ziele der OEM. Darüber hinaus wurde ein Rahmenwerk entwickelt.

um wirtschaftliche Bewertungskriterien auf Basis ihrer Benutzerfreundlichkeit und ihrer Fähigkeit zur Bewältigung komplexer Datenmengen auszuwählen. Abschließend wird vorgeschlagen, die Anforderungen für die Einführung von Refabrikation zusammen mit einer wirtschaftlichen Bewertung iterativ zu prüfen, um die Rentabilität von Refabrikation für OEMs zu analysieren. Die essentiellen Anforderungen beeinflussen die erste Iterationsschleife der wirtschaftlichen Bewertung. In dieser ersten Schleife wird verfeinert, wie die Grundanforderungen wirtschaftlich sinnvoll kombiniert werden können. Es folgt eine zweite Iterationsschleife zwischen den unterstehenden Anforderungen und der finanziellen Bewertung. Mit diesem Vorgehen kann das Potential einer rentablen Refabrikation gründlich untersucht werden, bevor mit der Realisierung begonnen wird. Dadurch können eventuell erfolglose Einführungsversuche vermieden und vergeblich aufgewendete Ressourcen reduziert werden. Der iterative Prozess wurde in einen 5-stufigen Modell zur Einführung von Refabrikation 5AFIR zusammengefasst.

tertillverkning r en industriell process d r en stomme en anv nd uttj nt eller trasig produkt omformas till en produkt vars specifikation och kvalitet motsvarar nyskick Idag utg r tertillverkning endast en liten del av den totala tillverkningsindustrin. Det finns flera typer av tertillverkare: den ovanligaste r originaltillverkande tertillverkare, det vill s ga ett tillverkande f retag som ven tertillverkar sina egna produkter. Genom den l ga grad av tertillverkning bland originaltillverkare idag finns det utrymme f r att verka f r en kning. En s dan kning kan bidra till milj m ssiga f rdelar genom att m ngden r material och energi reduceras j mf rt med nytillverkning. Det finns d rf r en m jlighet f r tertillverkning att bidra till en frikoppling av milj m ssig p verkan fr n ekonomisk tillv xt vilket i sin tur bidrar till ett mer h llbart samh lle. Fast att endast v rdera nyttan av tertillverkning leder inte direkt till en tillv xt inom tertillverkningsindustrin. F r att omfamna de milj m ssiga sociala och ekonomiska nyttor som tertillverkning kan bidra med m ste originaltillverkare vara medvetna om hur tertillverkning kan initieras och implementeras i praktiken p ett ekonomiskt l nsamt s tt. Denna doktorsavhandlings syfte r d rf r att utveckla st d f r originaltillverkare att initiera l nsam tertillverkning. Forskningen utg r fr n en fallstudie och transdisciplin r forskningsmetodik d r initieringen av l nsam tertillverkning studeras vid tv originaltillverkare. Den utf rda forskningen utvecklade kunskap om hur tertillverkning kan integrerats i en originaltillverkares befintliga verksamhet. Parallellt med detta utvecklades ekonomiska utv rderingsmetoder f r att tillhandah lla ett m tt p hur v l fallf retagen skulle kunna utf ra tertillverkning. F r fallstudien utvecklades det sju tertillverkningsscenario som str cker sig fr n centraliserad tertillverkning som utf rs av originaltillverkaren till decentraliserad som utf rs vid flertalet platser inom ett terf rs ljarn tverk. Vilket scenario som var mest f rdelaktigt berodde exempelvis p riskmedvetenhet, samarbete mellan akt rer och tillverkningsvolym. Men givet ideala f rh llanden visades det att centraliserad tertillverkning vore potentiellt mest f rdelaktigt f r fallf retaget eftersom f rre mellanh nder och stordriftsf rdelar m jligg r l gre kostnader. F r det andra fallf retagets initieringen av tertillverkning vid till mpning av den transdisciplin ra forskningsmetodiken var det ett aff rsmodellsfokus vilket innebar att tertillverkningssystemet var en konsekvens av ett beslut f r en viss aff rsmodell. I denna del av forskningen

utvecklades en scenariobaserad analysmetod för att förstå under vilka förhållanden som affärsmodellen tillsammans med tertillverkning vore mer lukrativt för företagets originaltillverkaren och mindre kostsamt för användaren. Kunden. För detta utvecklades en systematisk ansats för ekonomiska utvärderingar bestående av tre steg: 1. tillhandahålla en kostnadsöverblick för varje affärsmodell, 2. skapa scenarion genom att modifiera kostnadsdrivarna och 3. kombinera scenarion för att uppnå synergieffekter. Med utgångspunkt i fallstudien utvecklades även faktorer för att forma krav för hur originaltillverkare kan initiera tertillverkning. Dessa faktorer delas upp i grundläggande och st djupare kravställningar och de bygger tillsammans upp ett ramverk benämnt tertillverkningsraketen. De grundläggande kravställningarna lyfter fram elementära krav vid utförandet av tertillverkning och om en av de fyra skulle saknas kan tertillverkning inte utföras på ett framgångsrikt sätt. De st djupare kravställningarna rör avvägning för att förbättra tertillverknings effektiviteten genom exempelvis bekymmersfritt utförande av processer, organisationsförändringar eller informationsutbytet. Därigenom för att nå den fulla potentialen av tertillverkning behövs både de grundläggande och de st djupare kravställningarna. Dessutom utforskades om det för ekonomiska utvärderingsmetoder i en systematisk litteraturgenomgång för att identifiera insikter för att utveckla sådana metoder skräddarsydda för individuella originaltillverkare som initierar tertillverkning. För närmare detaljer se sex perspektiv för att forma ekonomiska utvärderingsmetoder. Dessa tecken som väl systemgrupperna för utvärderingarna som individuella behov och visioner hos originaltillverkare. För att vidare stödja företagen utvecklades ett ramverk för att välja ekonomiska utvärderingsmetoder för initieringar av tertillverkning baserat på användarvänlighet och förmåga att hantera komplexa datamängder. Slutligen förklarades det att tillämpa de framtagna kravställningarna tillsammans med ekonomisk utvärdering genom att iterativt undersöka möjligheterna för hur tertillverkning kan initieras för originaltillverkare. De grundläggande kravställningarna influerar upplägget för den första iterationen av den ekonomiska utvärderingen vilken i sin tur nyttjas för att förfinas hur de grundläggande kravställningarna kan ligga samman på ett ekonomiskt fördelaktigt sätt. När en godtagbar nivå uppnåtts kan ytterligare en iterativ process utföras mellan de st djupare kravställningarna och den ekonomiska utvärderingen. Genom att tillämpa det förklarade tillvägagångssättet kan möjligheterna för tertillverkning undersökas på en detaljerad nivå innan initieringsförsök i praktiken och således kan möjligheten till resurser minskas. Utöver detta integrerades det iterativa tillvägagångssättet med en 5-stegsansats för initiering av tertillverkning. 5AFIR
