Glancey,2025-08-07 As World War II came to an end and America's nuclear bombing of Hiroshima and Nagasaki shocked the world it became clear that the nascent Cold War would be as different a conflagration from WWII as that war was from WWI. Believing that the UK was extremely vulnerable to nuclear attack it was quickly determined that only the threat of large scale damage from similar weapons could prevent a Soviet attack. And thus V Force was born. Entered into service between 1955 and 1957 the three models of V class bombers that made up Britain's strategic nuclear strike force the Vickers Valiant Avro Vulcan and Handley Page Victor were modern marvels of machinery. Capable of both high and low level attack with their sleek delta wing designs and supremely quick despite the massive bomb loads they carried these aircraft were central tenets of Britain's nuclear weapons development. Despite a fall as precipitous as their rise when the Royal Navy took over Britain's nuclear deterrent role in 1968 like a phoenix from the ashes the V bombers enjoyed a second life as conventional bombers the Valiant gaining fame in the Suez Crisis the Victors in the Indonesia Malaysia confrontation and the Vulcans undertook the longest bombing raid in history for Operation Black Buck in the Falklands Campaign of 1982. V Force is both an ode to these most resilient and beautiful of British aircraft and a lens through which to view Britain's Cold War experience. *The Art of*

Classic Planning Nir Haim Buras,2020-01-28 An accomplished architect and urbanist goes back to the roots of what makes cities attractive and livable demonstrating how we can restore function and beauty to our urban spaces for the long term. Nearly everything we treasure in the world's most beautiful cities was built over a century ago. Cities like Prague Paris and Lisbon draw millions of visitors from around the world because of their exquisite architecture walkable neighborhoods and human scale. Yet a great deal of the knowledge and practice behind successful city planning has been abandoned over the last hundred years not because of traffic population growth or other practical hurdles but because of ill considered theories emerging from Modernism and reactions to it. The errors of urban design over the last century are too great not to question. The solutions being offered today sustainability walkability smart and green technologies hint at what has been lost and what may be regained but they remain piecemeal and superficial. In *The Art of Classic Planning* architect and planner Nir Haim Buras documents and extends the time tested and holistic practices that held sway before the reign of Modernism. With hundreds of full color illustrations and photographs that will captivate architects planners administrators and developers *The Art of Classic Planning* restores and revitalizes the foundations of urban planning. Inspired by venerable cities like Kyoto Vienna and Venice and by the great successes of L'Enfant's Washington Haussmann's Paris and Burnham's Chicago Buras combines theory and a host of examples to arrive at clear guidelines for best practices in classic planning for today's world. *The Art of Classic Planning* celebrates the enduring principles of urban design and invites us to return to building beautiful cities. **Conservation** Helen Kopnina, Haydn Washington,2019-08-05 This book provides keys to decrypt current political

debates on the environment in light of the theories that support them and provides tools to better understand and manage environmental conflicts and promote environmentally friendly behaviour As we work towards global sustainability at a time when efforts to conserve biodiversity and combat climate change correspond with land grabs by large corporations food insecurity and human displacement While we seek to reconcile more than human relations and responsibilities in the Anthropocene we also struggle to accommodate social justice and the increasingly global desire for economic development These and other challenges fundamentally alter the way social scientists relate to communities and the environment This book takes as its point of departure today's pressing environmental challenges particularly the loss of biodiversity and the role of communities in protected areas conservation In its chapters the authors discuss areas of tension between local livelihoods and international conservation efforts between local communities and wildlife and finally between traditional ways of living and modernity The central premise of this book is while these tensions cannot be easily resolved they can be better understood by considering both social and ecological effects in equal measure While environmental problems cannot be seen as purely ecological because they always involve people who bring to the environmental table their different assumptions about nature and culture so are social problems connected to environmental constraints While nonhumans cannot verbally bring anything to this negotiating table aside from vast material benefits that society relies on the distinct perspective of this book is that there is a need to consider the role of nonhumans as equally important stakeholders albeit without a voice This book develops an argument that human environmental relationships are set within ecological reality and ecological ethics and rather than being mutually constitutive processes humans have obligate dependence on nature not vice versa This would enable an ethical position encompassing the needs of other species and giving simultaneous without one being subordinated to another consideration to justice for humans and non humans alike The book is accessible to both social scientists and conservation specialists and intends to contribute to strengthening interdisciplinary collaborations in the field of conservation
