

Algebra 2 – Final Exam Topics (Semester 1)

General Terms and Notation

- **Function notation** – $f(x)$ is essentially “y” however, it’s describing the *name* of the function (f) and the input of the function (x). $f(x) = y$ means that for the function f , when you input a value of x the output is y , which corresponds to the point (x, y)
- **Domain** – All the **possible x -values** where a function exists (the possible inputs). Implied to be all real numbers ($\mathbb{R}$), domain issues come from square roots of negatives or dividing by 0
- **Range** – All the **possible y -values** where a function exists (the possible outputs). As you move from the bottom to the top of the graph, on what y -values does the function have a corresponding x -value?
- **End Behavior** – As x approaches infinity (as you move to the far right of the graph), where are the y -values going (usually up to infinity or down to negative infinity)? As x approaches negative infinity (as you move to the far left of the graph), where are the y -values going (usually up to infinity or down to negative infinity)?
 - As $x \rightarrow \infty, f(x) \rightarrow$
 - As $x \rightarrow -\infty, f(x) \rightarrow$
- **Types of Notation**
 - **Inequality Notation:** $x > a$ $x \leq b$ $c < x < d$
 - **Interval Notation:** (a, ∞) $(-\infty, b]$ (c, d)
- **Positive/Negative** – A function is *positive* when it exists **above** the x -axis (the y -values lie above the x -axis). A function is *negative* when it exists **below** the x -axis (the y -values lie below the x -axis). You write your answers as an interval of the x -values where the function is behaving this way.
- **Increasing/Decreasing** – A function is *increasing* when the y -values are **increasing** (when the graph has a generally positive slope). A function is *decreasing* when the y -values are **decreasing** (when the graph has a generally negative slope). You write your answers as an interval of the x -values where the function is behaving this way.
- **Maximum/Minimum** – A function has a *maximum* when it has the highest y -value compared to the points around it (when the function has a **hill**). A function has a *minimum* when it has the lowest y -value compared to the points around it (when the function has a **valley**).
- **Rate of Change** – A function’s *rate of change* is the ratio (fraction) of the change in the y -values in an interval over the change in the x -values in an interval. It’s the same thing as **slope**! $m = \frac{\Delta y}{\Delta x} = \frac{y_2 - y_1}{x_2 - x_1}$
- **Zeros of a Function** – Where the function touches or crosses the x -axis (where $f(x) = 0$). These are also called the **factors** or **roots** of a function.
- **Equations of lines** – Point slope: $y - y_1 = m(x - x_1)$ Slope intercept: $y = mx + b$

Chapter 1 – Linear Functions

- **Main parent functions** – constant $f(x) = 1$, linear $f(x) = x$, absolute value $f(x) = |x|$, quadratic $f(x) = x^2$
- **Transformations of a Graph**
 - $f(x - h)$ shifts a function to the **right** by h units
 - $f(x + h)$ shifts a function to the **left** by h units
 - $f(x) + k$ shifts a function **up** by k units
 - $f(x) - k$ shifts a function **down** by k units
 - $af(x)$ vertically **stretches or compresses**: stretch if $a > 1$, compress if $0 < a < 1$
 - $-f(x)$ **reflects** a function across the x -axis
- **Solving Systems of Equations**
 - **Linear System in 2 variables**
 - Graphing – check where the lines intersect
 - Substitution – solve for one variable in one equation and plug it into the other equation
 - Elimination – multiply (if necessary) to get the coefficients the same for one variable then add/subtract the two equations to eliminate that variable
 - Answer should be written as an ordered pair
 - **Linear system in 3 variables**
 - Matrix - 2^{nd} , x^{-1} , Edit a 3x4 matrix using the coefficients (in order) from your system, 2^{nd} , Mode, 2^{nd} , x^{-1} , Math, $rref$, 2^{nd} , x^{-1} , Enter.
 - Check the last row to determine the type of solution
