

polynomials

A **polynomial** is an algebraic expression in which the exponent of each variable is a non-negative integer.

examples

$$3x^2 + 1$$

$$5y^3 + 2y^2 + 3$$

The **terms** of a polynomial refer to the parts of the expression separated by the + or - operator.

$$8x^2 + 6x + 4$$

There are 3 terms in this polynomial.

like terms have the same variable and the same power.

e.g. $3x^2$ and x^2

unlike terms have different variables and/or power

e.g. $5x^4$ and $5x^2$

monomial single term

binomial two terms

trinomial three terms

standard form

e.g. $3x^4 + 2x^3 + 8x^2 + 4x + 1$

The polynomial is written with the variable's exponent in descending order.

Adding polynomials add like terms

Subtracting polynomials rewrite as addition - Keep Change Change

$$(2x - 3) - (5x^2 + 3x - 2)$$

Keep change to addition change sign of each term

Multiplying polynomials via FOIL

- F** first terms
- O** outside terms
- I** inside terms
- L** last terms

$$(5x + 3)(2x + 1)$$

$$10x^2 + 5x + 6x + 3$$

$$10x^2 + 11x + 3$$

GED Math Essentials Kamrouz Berenji ,2024-10-29 Welcome to GED Math Essentials Welcome future GED graduates This book is designed to guide you through the exciting and rewarding journey of mastering high school level mathematics Whether you re returning to education after some time away or continuing your studies this book is tailored to help you succeed What To Expect Inside you ll find a comprehensive collection of lessons practice problems and strategies covering the key topics you ll encounter on the GED math exam We ve broken down complex concepts into easy to understand sections ensuring you can follow along and build your skills step by step **Teaching and Learning High School**

Mathematics Charlene E. Beckmann,Denisse R. Thompson,Rheta N. Rubenstein,2009-11-02 Too many high school students faced with mathematics in courses at the level of algebra and beyond find themselves struggling with abstract concepts and unwilling to pursue further study of mathematics When students curtail their course taking in mathematics they may be impacting their college and career options Thus high school mathematics teachers have the responsibility to help students recognize the value and importance of mathematics while also designing instruction that makes mathematics accessible to all students Ball and Bass 2000 as well as other mathematics educators have recognized that mathematics teachers not only need to know mathematics content and mathematics pedagogy i e teaching strategies but they also need to know how these ideas are integrated This mathematical knowledge for teaching is the knowledge that teachers of mathematics need and it differs from the knowledge that research or applied mathematicians must know This text is designed to provide teachers with insights into this mathematical knowledge for teaching Teaching and Learning High School Mathematics is likely different from many other texts that you have used It integrates both content and pedagogy to help you develop and build your own understanding of teaching The text is designed to help you develop deep conceptual understanding of fundamental mathematics Ma 1999 so that you are able to approach mathematics from multiple perspectives with many tools Such flexibility in teaching is essential if teachers are to help all students become mathematically proficient Throughout this book you are encouraged to work in cooperative teams This strategy is designed to help you develop a mathematics learning community and build a professional network that will be a valuable resource during your professional career Hopefully you will experience the benefits of engaging in rich mathematical discussions with peers and consider how to encourage such learning environments in your own classrooms Lesson planning is another element pervasive throughout this text To help teachers plan for effective student centered lessons the Question Response Support QRS Guide is introduced in Lesson 1 1 and used throughout the remainder of the lessons The QRS Guide is a tool on which teachers may record tasks or questions Q for students expected and observed student responses R and teacher support S in the form of additional just enough questions to support students in their progress on the task In each unit teachers expand their repertoire of teaching and

learning elements and strategies and incorporate these elements as they plan additional lesson segments In Unit 4 lesson planning is formally introduced as teachers put together elements from previous units into complete cohesive lesson plans

Numerical Methods and

Analysis with Mathematical Modelling William P. Fox,Richard D. West,2024-08-07 What sets Numerical Methods and

Analysis with Mathematical Modelling apart are the modelling aspects utilizing numerical analysis methods to obtain solutions The authors cover first the basic numerical analysis methods with simple examples to illustrate the techniques and discuss possible errors The modelling prospective reveals the practical relevance of the numerical methods in context to real world problems At the core of this text are the real world modelling projects Chapters are introduced and techniques are discussed with common examples A modelling scenario is introduced that will be solved with these techniques later in the chapter Often the modelling problems require more than one previously covered technique presented in the book

Fundamental exercises to practice the techniques are included Multiple modelling scenarios per numerical methods illustrate the applications of the techniques introduced Each chapter has several modelling examples that are solved by the methods described within the chapter The use of technology is instrumental in numerical analysis and numerical methods In this text Maple Excel R and Python are illustrated The goal is not to teach technology but to illustrate its power and limitations to perform algorithms and reach conclusions This book fulfills a need in the education of all students who plan to use technology to solve problems whether using physical models or true creative mathematical modeling like discrete dynamical systems

Mathematics for Secondary School Teachers Elizabeth G. Bremigan,Ralph J. Bremigan,John D. Lorch,2011

Mathematics for Secondary School Teachers discusses topics of central importance in the secondary school mathematics

curriculum including functions polynomials trigonometry exponential and logarithmic functions number and operation and measurement Acknowledging diversity in the mathematical backgrounds of pre service teachers and in the goals of teacher preparation programs the authors have written a flexible text through which instructors can emphasize any of the following Basics exploration of key pre college topics from intuitive and rigorous points of view Connections exploration of relationships among topics using tools from college level mathematics Extensions exploration of college level mathematical topics that have a compelling relationship to pre college mathematics Mathematics for Secondary School Teachers provides a balance of discovery learning and direct instruction Activities and exercises address the range of learning objectives appropriate for future teachers Beyond the obvious goals of conceptual understanding and computational fluency readers are invited to devise mathematical explanations and arguments create examples and visual representations remediate typical student errors and misconceptions and analyze student work Introductory discussion questions encourage prospective teachers to take stock of their knowledge of pre college topics A rich collection of exercises of widely varying degrees of difficulty is integrated with the text Activities and exercises are easily adapted to the settings of individual assignments group projects and classroom discussions Mathematics for Secondary School Teachers is primarily intended as the text for a bridge or capstone course for pre service secondary school mathematics teachers It can also be used in alternative licensure programs as a supplement to a mathematics methods course as the text for a graduate course for in service teachers and as a resource and reference for in service faculty development
