The Quality Shoe Company tests different prices of a new type of shoe at different stores. The table shows the relationship between the selling price of a pair of shoes and the monthly revenue per store the company made from selling the shoes.

- a) Use a graphing calculator to determine the equation of a quadratic model that can be used to predict y , the monthly revenue per store in dollars when the selling price for each pair of shoes is x dollars. Round values to the nearest hundredth.

$$y = -.11x^2 + 54.74x + 3878.57$$

- b) Use your model to determine the monthly revenue per store if the selling price is \$175.

Revenue: \$10,089.32

- c) What would the selling price of a pair of shoes be if the monthly revenue per store was \$9000?

Solve graphically by graphing $y = 9,000$ and calculating the intersection values.

Luckin, K.R. Koedinger, J. Greer, 2007-06-29 The nature of technology has changed since Artificial Intelligence in Education AIED was conceptualised as a research community and Interactive Learning Environments were initially developed. Technology is smaller, more mobile, networked, pervasive and often ubiquitous as well as being provided by the standard desktop PC. This creates the potential for technology supported learning wherever and whenever learners need and want it. However, in order to take advantage of this potential for greater flexibility, we need to understand and model learners and the contexts with which they interact in a manner that enables us to design, deploy and evaluate technology to most effectively support learning across multiple locations, subjects and times.
