All Of Statistics A Concise Course In Statistical Inference:

All of Statistics Larry Wasserman, 2004-09-17 This book is for people who want to learn probability and statistics quickly. It brings together many of the main ideas in modern statistics in one place. The book is suitable for students and researchers in statistics, computer science, data mining, and machine learning. This book covers a much wider range of topics than a typical introductory text on mathematical statistics. It includes modern topics like nonparametric curve estimation, bootstrapping, and classification topics that are usually relegated to follow-up courses. The reader is assumed to know calculus and a little linear algebra. No previous knowledge of probability and statistics is required. The text can be used at the advanced undergraduate and graduate level. Larry Wasserman is Professor of Statistics at Carnegie Mellon University. He is also a member of the Center for Automated Learning and Discovery in the School of Computer Science. His research areas include nonparametric inference, asymptotic theory, causality, and applications to astrophysics, bioinformatics, and genetics. He is the 1999 winner of the Committee of Presidents of Statistical Societies Presidents Award and the 2002 winner of the Centre de recherches mathématiques de Montreal Statistical Society of Canada Prize in Statistics. He is Associate Editor of The Journal of the American Statistical Association and The Annals of Statistics. He is a fellow of the American Statistical Association and of the Institute of Mathematical Statistics.

Climate Time Series Analysis Manfred

Mudelsee, 2014-06-27 Climate is a paradigm of a complex system. Analysing climate data is an exciting challenge which is increased by non-normal distributional shape, serial dependence, uneven spacing, and timescale uncertainties. This book presents bootstrap resampling as a computing-intensive method able to meet the challenge. It shows the bootstrap to perform reliably in the most important statistical estimation techniques: regression, spectral analysis, extreme values, and correlation. This book is written for climatologists and applied statisticians. It explains step by step the bootstrap algorithms, including novel adaptations and methods for confidence interval construction. It tests the accuracy of the algorithms by means of Monte Carlo experiments. It analyses a large array of climate time series, giving a detailed account on the data and the associated climatological questions. Comprehensive mathematical and statistical summary of time series analysis techniques geared towards climate applications, accessible to readers with knowledge of college-level calculus and statistics. Computers and

Geosciences A key part of the book that separates it from other time series works is the explicit discussion of time uncertainty a very useful text for those wishing to understand how to analyse climate time series Journal of Time Series Analysis outstanding One of the best books on advanced practical time series analysis I have seen David J Hand Past President Royal Statistical Society

Approach to Regression with R Simon Sheather, 2009-03-11 This book focuses on tools and techniques for building regression models using real world data and assessing their validity A key theme throughout the book is that it makes sense to base inferences or conclusions only on valid models Plots are shown to be an important tool for both building regression models and assessing their validity We shall see that deciding what to plot and how each plot should be interpreted will be a major challenge In order to overcome this challenge we shall need to understand the mathematical properties of the fitted regression models and associated diagnostic procedures As such this will be an area of focus throughout the book In particular we shall carefully study the properties of residuals in order to understand when patterns in residual plots provide direct information about model misspecification and when they do not The regression output and plots that appear throughout the book have been generated using R The output from R that appears in this book has been edited in minor ways On the book web site you will find the R code used in each example in the text
