Catalysis Volume 33 James Spivey, Yi-Fan Han, Dushyant Shekhawat, 2021-06-16. This volume looks at modern approaches to catalysis and reviews the extensive literature which bridges the gap from academic studies in the laboratory to practical applications in industry not only for catalysis field but also for environmental protection.

Catalysis in the Refining of Fischer-Tropsch Syncrude Arno de Klerk, Edward Furimsky, 2010-12-15. Fischer Tropsch Synthesis (FTS) has been used on a commercial scale for more than eighty years. It was initially developed for strategic reasons because it offered a source of transportation fuels that was independent from crude oil. Unlike crude Fischer Tropsch synthetic crude is rich in olefins and oxygenates while being sulphur and nitrogen free. Consequently the catalysis involved in refining it is significantly different and only a few catalysts have been developed for the purpose. Until now an account of this topic has been missing from the literature despite mounting interest in the technology. This is the first book to provide a review and analysis of the literature, journal and patent on the catalysis needed to refine syncrude to transportation fuels. It specifically highlights the impact of oxygenates and how oxygenates affect selectivity and deactivation. This aspect is also related to the refining of biomass derived liquids. Topics covered include dimerisation, oligomerisation, isomerisation, hydroisomerisation, catalytic cracking, hydrocracking and hydrogenation, catalytic reforming, aromatic alkylation, etherification, dehydration and some oxygenate and wax specific conversions.

Organic Chemistry Penny Chaloner, 2014-12-15. Offering a different, more engaging approach to teaching and learning Organic Chemistry. A Mechanistic Approach classifies organic chemistry according to mechanism rather than by functional group. The book elicits an understanding of the material by means of problem solving instead of purely requiring memorization. The text enables a deep understanding.
