Interactive Collaborative Learning Michael E. Auer, David Guralnick, James Uhomoibhi, 2017-01-07 This book presents the proceedings of the 19th International Conference on Interactive Collaborative Learning held 21-23 September 2016 at Clayton Hotel in Belfast UK. We are currently witnessing a significant transformation in the development of education. The impact of globalisation on all areas of human life, the exponential acceleration of developments in both technology and the global markets, and the growing need for flexibility and agility are essential and challenging elements of this process that have to be addressed in general but especially in the context of engineering education. To face these topical and very real challenges, higher education is called upon to find innovative responses. Since being founded in 1998, this conference has consistently been devoted to finding new approaches to learning with a focus on collaborative learning. Today, the ICL conferences have established themselves as a vital forum for the exchange of information on key trends and findings and of practical lessons learned while developing and testing elements of new technologies and pedagogies in learning. Island Biogeography Robert J. Whittaker, 1998 Work on evolution on islands has a long established biogeographical pedigree stretching back to the work of Darwin and Wallace. Research generated ideas, theories and models which have played a central role in the development of mainstream ecology, evolutionary biology and biogeography. Island Biogeography is a new textbook aimed at advanced undergraduates and graduate students. This is the first comprehensive book to be written on the topic since 1981. It provides a much needed synthesis of recent development across the discipline, linking current theoretical debates with applied island ecology. Some themes that the book covers include the nature and formation of island environments, island ecological theories concerning species numbers, species assembly and composition, and an assessment of the human impact on island biodiversity. Written by an author who has been researching and teaching biogeography for many years, Island Biogeography is wide ranging, authoritative and accessible to students from across geography and the life sciences. This is the first truly modern textbook on a fascinating and important subject in evolution and ecology. **Island Geographies** Elaine Stratford, 2016-11-03 Islands and their environs, aerial, terrestrial, aquatic, may be understood as intensifiers, their particular and distinctive geographies enabling concentrated study of many kinds of challenges and opportunities. This edited collection brings together several emerging and established academics with expertise in island studies as well as interest in geopolitics, governance, adaptive capacity, justice, equity, self-determination, environmental care and protection, and land management. Individually and together, their perspectives provide theoretically useful, empirically grounded evidence of the contributions human geographers can make to knowledge and understanding of island places and the place of islands. Nine chapters engage with the themes, issues and ideas that characterise the borderlands between island studies and human geography and allied fields, and are contributed by authors for whom matters of place, space, environment and scale are key, and for whom islands hold an abiding fascination. The penultimate chapter is rather more experimental, a

conversation among these authors and the editor while the last chapter offers timely reflections upon island geographies past and future penned by the first named professor of island geography Stephen Royle
