Athreya,Howard Masur,2024-04-17 This textbook offers an accessible introduction to translation surfaces Building on modest prerequisites the authors focus on the fundamentals behind big ideas in the field ergodic properties of translation flows counting problems for saddle connections and associated renormalization techniques Proofs that go beyond the introductory nature of the book are deftly omitted allowing readers to develop essential tools and motivation before delving into the literature Beginning with the fundamental example of the flat torus the book goes on to establish the three equivalent definitions of translation surface An introduction to the moduli space of translation surfaces follows leading into a study of the dynamics and ergodic theory associated to a translation surface Counting problems and group actions come to the fore in the latter chapters giving a broad overview of progress in the 40 years since the ergodicity of the Teichmüller geodesic flow was proven Exercises are included throughout inviting readers to actively explore and extend the theory along the way Translation Surfaces invites readers into this exciting area providing an accessible entry point from the perspectives of dynamics ergodicity and measure theory Suitable for a one or two semester graduate course it assumes a background in complex analysis measure theory and manifolds while some familiarity with Riemann surfaces and ergodic theory would be beneficial **Introduction to Complex Manifolds** John M. Lee,2024-05-15 Complex manifolds are smooth manifolds endowed with coordinate charts that overlap holomorphically They have deep and beautiful applications in many areas of mathematics This book is an introduction to the concepts techniques and main results about complex manifolds mainly compact ones and it tells a story Starting from familiarity with smooth manifolds and Riemannian geometry it gradually explains what is different about

complex manifolds and develops most of the main tools for working with them using the Kodaira embedding theorem as a motivating project throughout The approach and style will be familiar to readers of the author's previous graduate texts new concepts are introduced gently with as much intuition and motivation as possible always relating new concepts to familiar old ones with plenty of examples The main prerequisite is familiarity with the basic results on topological smooth and Riemannian manifolds The book is intended for graduate students and researchers in differential geometry but it will also be appreciated by students of algebraic geometry who wish to understand the motivations analogies and analytic results that come from the world of differential geometry

Fields Medallists' Lectures, 2nd Edition Michael Atiyah, Daniel Jagolnitzer, 2003-11-03 Although the Fields Medal does not have the same public recognition as the Nobel Prizes they share a similar intellectual standing It is restricted to one field that of mathematics and an age limit of 40 has become an accepted

tradition Mathematics has in the main been interpreted as pure mathematics and this is not so unreasonable since major contributions in some applied areas can be and have been recognized with Nobel Prizes A list of Fields Medallists and their contributions provides a bird's eye view of mathematics over the past 60 years It highlights the areas in which at various times greatest progress has been made This volume does not pretend to be comprehensive nor is it a historical document On the other hand it presents contributions from Fields Medallists and so provides a highly interesting and varied picture The second edition of Fields Medallists Lectures features additional contributions from the following Medallists Kunihiko Kodaira 1954 Richard E Borcherds 1998 William T Gowers 1998 Maxim Kontsevich 1998 Curtis T McMullen 1998 and Vladimir Voevodsky 2002
